Helen Moore, Material Cultural Analyst

Lindsay Dales, Archaeologist

GIS/Mapping Bojan Radojevic, GIS Analyst

Senior Review Michael Teal, M.A.

Administrative Support Sunita Parajuli, Administrator

Acknowledgements

We respectfully acknowledge that the Study Area is located in the traditional territory of multiple Indigenous groups, including the Mississaugas of the Credit First Nation, Six Nations of the Grand River (the Haudenosaunee), the Huron-Wendat First Nation, and the Métis Nation of Ontario.

Executive Summary

The Executive Summary highlights key points from the report only; for complete information and findings, as well as the limitations, the reader should examine the complete report.

Golder Associates Ltd. (Golder), now WSP Canada Inc. (WSP), was retained by CBM Aggregates, a division of St Marys Cement Inc. (Canada), to conduct a Stage 3 Archaeological Assessment (AA) of Location 18 (AkHa-31), a historical Euro-Canadian site located within the license boundary for the proposed Caledon Pit/Quarry (the Study Area; Map 1). The Stage 3 AA was conducted to meet the requirements of the *Aggregate Resources Act* R.S.O. 1990, c.A.8. (Government of Ontario 1990a), and the Town of Caledon Official Plan and Zoning By-law Amendment under the *Planning Act*, R.S.O 1990, c.P.14 (Government of Ontario 1990b).

Golder previously completed a Stage 1 and 2 AA of the Study Area for the proposed Caledon Pit/Quarry under Project Information Number (PIF) P364-0164-2020 (Golder 2022). The area assessed is approximately 261.2 hectares (ha) located within part of Lots 15 to 17, Concession 4 West of Centre Road (WSCR), as well as part of Lot 16, Concession 3 WSCR, in the geographic Township of Caledon, former County of Peel, now the Town of Caledon, Regional Municipality of Peel (Peel Region) (Map 1). It consists predominately of cultivated fields in addition to uncultivated farmland (i.e., pastures), farmstead/residential areas, and wooded areas.

The Stage 1 and 2 AA resulted in the identification of 29 new archaeological sites (Locations 1 through 29) (Golder 2022) and re-established the location of the Cameron Site (AlHa-9), which was previously identified in 2001 (Archaeological Assessments Ltd. 2001). Of the 30 archaeological sites within the Study Area, a total of 14 were considered to have further cultural heritage value or interest and Stage 3 AA was recommended.

Location 18 (AkHa-31) is one of the 14 sites that was recommended for Stage 3 AA. It is a historical Euro-Canadian site that was identified through a combination of Stage 2 test pit survey and pedestrian survey of a residential lot and adjacent agricultural field. The site is located over an area measuring 85 m (N-S) by 95 m (E-W) within part of Lot 17, Concession 4 WSCR (Supplementary Documentation; Map SD1).

The Stage 3 AA of Location 18 (AkHa-31) consisted of the hand excavation of 68 test units across an area measuring approximately 65 m north-south by 100 m east-west. The Stage 3 excavations resulted in the recovery of 6,835 total artifacts, of which 6,571 were found from an intact context and 264 were found from a disturbed, fill context. The assemblage from an intact context includes 6,025 historical and 20th century Euro-Canadian artifacts, 519 faunal elements, 24 wood fragments, and three pre-contact Indigenous artifacts (Map 6). The analysis of the Location 18 (AkHa-31) artifact assemblage revealed that the late 19th century and 20th century material consists of 43.3% of the dateable assemblage with 56.8% of the remaining components dating to pre-1870. Of this 56.8%, only 0.4% dates to the early 19th century. The Stage 3 excavations also resulted in the identification of eight subsurface cultural features.

Location 18 (AkHa-31) appears to be a domestic refuse site that has been continuously occupied since the mid-19th century. The site is likely associated with the family of Duncan Cameron who purchased Lot 17, Concession 4 WSCR in May 1846. Location 18 (AkHa-31) surrounds the existing farmhouse at 18667 Mississauga Road, which appears to be the same house that is visible on both the 1859 and 1877 historical maps (Map 3)

Based on the results of the Stage 3 AA, the historical Euro-Canadian component of Location 18 (AkHa-31) does not meet any of the criteria identified in the 19th Century Rural Historical Farmstead Sites: Standards for Consultant Archaeologists (RHF Standards) (Government of Ontario 2021), or Standards 1a-b of Section 3.4.2 of

the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011) for domestic archaeological sites dating after 1830. As such, it is concluded that Location 18 (AkHa-31) has been sufficiently documented and is concluded to have no further cultural heritage value or interest and does not require Stage 4 mitigation prior to any development impacts.

The pre-contact Indigenous artifact assemblage consisted of three pieces of lithic debitage made of Onondaga chert. Lithic debitage is not a diagnostic artifact type and therefore cannot be assigned a specific occupational time period or specific cultural affiliation. The isolated nature of the artifacts could be attributed to being inadvertently intermixed with the historical material and redeposited sometime during the historical occupation. As such, the pre-contact Indigenous component at the site is concluded to have no further cultural heritage value or interest as it does not meet the criteria identified in Section 3.4.1, Standards 1a-d of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011).

The results of the Stage 3 AA of Location 18 (AkHa-31), and the analysis and conclusions presented in Section 6.0, provide the basis for the following recommendations:

- The historical Euro-Canadian component of Location 18 (AkHa-31) has no further cultural heritage value or interest and does not require Stage 4 mitigation of impacts.
- 2) The pre-contact Indigenous component of Location 18 (AkHa-31) has no further cultural heritage value or interest and does not require Stage 4 mitigation of impacts.

The Ontario Ministry of Citizenship and Multiculturalism is asked to review the results and recommendations presented herein, accept this report into the Provincial Register of archaeological reports and issue a standard letter of compliance with the Ministry's 2011 *Standards and Guidelines for Consultant Archaeologists* and the terms and conditions for archaeological licencing.

Study Limitations

WSP has prepared this report in a manner consistent with that level of care and skill ordinarily exercised by members of the archaeological profession currently practicing under similar conditions in the jurisdiction in which the services are provided, subject to the time limits and physical constraints applicable to this report. No other warranty expressed or implied is made.

This report has been prepared for the specific site, design objective, developments, and purpose described to WSP by CBM Aggregates, a division of St. Marys Cement Inc. (the Client). The factual data, interpretations, and recommendations pertain to a specific project as described in this report and are not applicable to any other project or site location.

The information, recommendations, and opinions expressed in this report are for the sole benefit of the Client. No other party may use or rely on this report or any portion thereof without WSP's express written consent. If the report was prepared to be included for a specific permit application process, then upon the reasonable request of the Client, WSP may authorize in writing the use of this report by the regulatory agency as an Approved User for the specific and identified purpose of the applicable permit review process. Any other use of this report by others is prohibited and is without responsibility to WSP. The report, all plans, data, drawings, and other documents as well as electronic media prepared by WSP are considered its professional work product and shall remain the copyright property of WSP, who authorizes only the Client and Approved Users to make copies of the report, but only in such quantities as are reasonably necessary for the use of the report by those parties. The Client and Approved Users may not give, lend, sell, or otherwise make available the report or any portion thereof to any other party without the express written permission of WSP. The Client acknowledges that electronic media is susceptible to unauthorized modification, deterioration, and incompatibility and therefore the Client cannot rely upon the electronic media versions of WSP's report or other work products.

Unless otherwise stated, the suggestions, recommendations, and opinions given in this report are intended only for the guidance of the Client in the design of the specific project.

Special risks occur whenever archaeological investigations are applied to identify subsurface conditions and even a comprehensive investigation, sampling and testing program may fail to detect all or certain archaeological resources. The sampling strategies incorporated in this study, if any, comply with those identified in the Ministry of Citizenship and Multiculturalism 2011 *Standards and Guidelines for Consultant Archaeologists*.

APPENDIX A

Location 18 (AkHa-31) Artifact Catalogue

1.0 PROJECT CONTEXT

1.1 Development Context

Golder Associates Ltd. (Golder), now WSP Canada Inc. (WSP), was retained by CBM Aggregates, a division of St Marys Cement Inc. (Canada), to conduct a Stage 3 Archaeological Assessment (AA) of Location 18 (AkHa-31), a historical Euro-Canadian site located within the license boundary for the proposed Caledon Pit/Quarry (the Study Area; Map 1). The Stage 3 AA was conducted to meet the requirements of the *Aggregate Resources Act* R.S.O. 1990, c.A.8. (Government of Ontario 1990a), and the Town of Caledon Official Plan and Zoning By-law Amendment under the *Planning Act*, R.S.O 1990, c.P.14 (Government of Ontario 1990b).

Golder previously completed a Stage 1 and 2 AA of the Study Area for the proposed Caledon Pit/Quarry under Project Information Number (PIF) P364-0164-2020 (Golder 2022). The area assessed is approximately 261.2 hectares (ha) located within part of Lots 15 to 17, Concession 4 West of Centre Road (WSCR), as well as part of Lot 16, Concession 3 WSCR, in the geographic Township of Caledon, former County of Peel, now the Town of Caledon, Regional Municipality of Peel (Peel Region) (Map 1). It consists predominately of cultivated fields in addition to uncultivated farmland (i.e., pastures), farmstead/residential areas, and wooded areas.

The Stage 1 and 2 AA resulted in the identification of 29 new archaeological sites (Locations 1 through 29) (Golder 2022) and re-established the location of the Cameron Site (AlHa-9), which was previously identified in 2001 (Archaeological Assessments Ltd. 2001). Of the 30 archaeological sites within the Study Area, a total of 14 were considered to have further cultural heritage value or interest and Stage 3 AA was recommended.

Location 18 (AkHa-31) is one of the 14 sites that was recommended for Stage 3 AA. It is a historical Euro-Canadian site that was identified through a combination of Stage 2 test pit survey and pedestrian survey of a residential lot and adjacent agricultural field. The site is located over an area measuring 85 m (N-S) by 95 m (E-W) within part of Lot 17, Concession 4 WSCR (Supplementary Documentation; Map SD1).

The Stage 3 AA was conducted under professional license P364, issued to Michael Teal of WSP by the MCM (PIF P364-0209-2022). All activities undertaken during the assessment followed the *Ontario Heritage Act* and the MCM's (2011) *Standards and Guidelines for Consultant Archaeologists*. All fieldwork occurred between August 18 and September 7, 2022. Permission to access the Study Area to conduct all required archaeological fieldwork activities, including the recovery of artifacts, was provided by CBM Aggregates.

1.2 Objectives

The Stage 3 AA was completed with the following objectives:

- To determine the extent of the archaeological site and the characteristics of the artifacts.
- To collect a representative sample of artifacts.
- To assess the cultural heritage value or interest of the archaeological site.
- To determine the need for mitigation of development impacts and recommend appropriate strategies for mitigation and future conservation.

2.0 HISTORICAL CONTEXT

The following historical narrative is intended to provide a general overview of the interpreted land use during the "Pre-Contact Period" and "Early Contact Period" within the vicinity of the current study area. This historical overview is primarily based on archaeological and historical interpretations inferred over the past 50 years, and generally reflect inferences and interpretations made by non-Indigenous representatives.

The text below is not intended to provide a comprehensive historical overview of the landscape prior to, and following the arrival of Europeans to Ontario, but rather provide a general overview context that can be referenced when determining the potential for archaeological resources within the current project study area.

The text and comments below, including the cited references, may reflect archaeological and contemporary literature within general publications, but may not represent the opinions of those Indigenous communities whose history it is purported to reflect.

2.1 Pre-Contact Indigenous Period

The general culture history of southern Ontario based on Ellis and Ferris (1990) is summarised in Table 1, while Map 2 displays the pre-contact Indigenous culture history of southern Ontario.

Table 1: Overview of cultural chronology of southern Ontario.

| Period | | Time Period (circa) | Characteristics |
|-------------|--------|------------------------|--|
| Paleo Early | | 9000 - 8400 BC | Gainey, Barnes, and Crowfield traditions; small bands; mobile hunters and gatherers and large territories; fluted projectiles. |
| | Late | 8400 - 8000 BC | Holcomb, hi-Lo and Lanceolate biface traditions; continuing mobility; campsite/way-station sites; smaller territories are utilized; non-fluted projectiles. |
| Archaic | Early | 8000 - 6000 BC | Side-notched, Corner-notched (e.g., Nettling, Thebes) and Bifurcate Base traditions; growing diversity of stone tool types; heavy woodworking tools appear (e.g., ground stone axes and chisels). |
| | Middle | 6000 - 2500 BC | Stemmed (e.g., Kirk, Stanley/Neville), Brewerton side- and corner-notched traditions; reliance on local resources; populations increasing; more ritual activities; fully ground and polished tools; net-sinkers common; earliest copper tools. |
| | Late | 2000 - 950 BC | Narrow Point (e.g., Lamoka), Broad Point (e.g., Genesee), and Small Point (e.g., Crawford Knoll) traditions: less mobility; use of fish-weirs; more formal cemeteries appear; stone pipes emerge; long-distance trade (marine shells and galena). |

| Period | | Time Period (circa) | Characteristics |
|----------|-------------------------|------------------------|--|
| Woodland | Early | 950 - 400 BC | Meadowood tradition; cord-roughened ceramics emerge; Meadowood cache blades and side-notched points; Bands of up to 35 people. |
| | Middle | 400 BC - AD 500 | Saugeen tradition; stamped ceramics appear; Saugeen projectile points; cobble spall scrapers; seasonal settlements and resource utilization; post holes, hearths, middens, cemeteries, and rectangular structures identified. |
| | Transitional | AD 550 - 900 | Princess Point tradition; cord roughening, impressed lines, and punctate designs on pottery; adoption of maize horticulture at the western end of Lake Ontario; oval houses and 'incipient' longhouses; first palisades; villages with 75 people. |
| | early Late Woodland | AD 900 - 1300 | Glen Meyer tradition; settled village-life based on agriculture; small villages (0.4 ha) with 75-200 people and 4-5 longhouses; semi-permanent settlements. |
| | middle Late Woodland | AD 1300 - 1400 | Uren and Middleport traditions; classic longhouses emerge; larger villages (1.2 ha) with up to 600 people; more permanent settlements (30 years). |
| | late Late Woodland | AD 1400 - 1600 | Pre-contact Neutral tradition; larger villages (1.7 ha); examples up to 5 ha with 2,500 people; extensive croplands; also, hamlets, cabins, camps, and cemeteries; potential tribal units; fur trade begins ca. 1580; European trade goods appear. |

Research and previous archaeological assessments have demonstrated that the area around the Town of Caledon was intensively occupied by pre-contact Indigenous communities from the Paleo period up to the time of contact. The following subsections outline the cultural or temporal periods recognized for southern Ontario more generally.

2.1.1 Paleo Period

The Paleo Period represents a temporal classification developed by archaeologists and does not reflect any inferences of initial human habitation. Based on archaeological investigations, the first human occupation of southern Ontario begins just after the end of the Wisconsin Glacial Period. Although there were a complex series of ice retreats and advances which played a large role in shaping the local topography, southern Ontario was ice free by approximately 12,500 years ago.

The archaeological record has documented human settlement at 11,000 years ago, when the area was settled by Indigenous groups who had been living south of the Great Lakes. The period of these early inhabitants is known as the Paleo Period (Ellis and Deller 1990). The Paleo Period in Ontario is broadly characterized by many small groups of hunter-gatherers whose subsistence strategies followed a pattern of seasonal mobility over large areas,

often travelling distances in excess of 150 km in an effort to procure raw materials for the production of lithic tools and the hunting of contemporary animals along migratory routes including caribou as well as mammoth and mastodon. For example, groups in southern Ontario appear to have followed a seasonal round that extended from as far south as Chatham to the Horseshoe Valley north of Barrie.

The research suggests that population densities were very low during the Early Paleo Period, and, as such, archaeological examples of sites from this time are rare (Ellis and Deller 1990:54). The current understanding of Early Paleo locality is that sites tend to be situated in elevated topography on well-drained loamy soils with many of the known sites located on former beach ridges associated with glacial lakes. Many of the archaeologically investigated Paleo sites are relatively small in size compared to later periods and typically represent contemporary camp sites; however, there are large sites, such as the Parkhill and Fisher sites, identified as extending over several hectares. It is likely these larger sites were formed as people continued to occupy the same area for short durations over the course of several years. Given the placement of many sites on elevated locations, it has been suggested that they may represent communal hunting camps as they would likely have been advantageous to observe and intercept migratory mammals such as caribou (Ellis and Deller 1997). Other sites, such as smaller Early Paleo camps, were situated throughout the interior of Ontario were typically situated adjacent to wetlands.

Paleo Period sites are commonly recognized by the presence of distinctive, finely-crafted lance points. Knives, gravers, scrapers and a variety of other stone processing tools are also typically associated with Paleo Period sites (MCR 1981). Diagnostic signatures of Early Paleo Period populations include the production of projectile points with channel flakes or flutes predominately manufactured from Collingwood or Onondaga chert. Paleo Period fluted points may be a reflection of large game hunting, while tools such as scrapers, piercing implements and gravers that are typically associated with Paleo Period sites may have been used in the manufacture and repair of wooden implements, bone tools and clothing (Peers 1985).

By the Late Paleo Period (8400-8000 BC), enclosed coniferous forests with some minor deciduous elements became established in southern Ontario. It is likely that many of the large game species that had been hunted during the early epoch of the Paleo Period had either moved further north, or as in the case of the mastodons and mammoths, became extinct. Similar to the inhabitants during the Early Paleo Period, Late Paleo Period populations traversed large territories in response to seasonal resource fluctuations. The transition to the Late Paleo Period also included projectile points comprised of smaller unfluted projectiles along with lanceolate parallel flaked stemmed and non-stemmed Plano points, while hunting strategies may have transitioned from communal groups to more individualized pursuits (Ellis and Deller 1997).

2.1.2 Archaic Period

During the Early Archaic Period (8000-6000 BC), a gradual increase in atmospheric humidity in conjunction with warmer summers influenced the environmental landscape. Fossil pollen and spore identification from sedimentation cores lifted from Lovesick Lake provide evidence of climate change, with jack pine forests becoming dominant during the beginning of the Early Archaic Period (Teichroeb 2007).

Concurrent with the environmental evolution during the Early Archaic Period were notable diagnostic technological changes including the appearance of side and corner-notched projectile points. Other significant innovations included the introduction of ground stone tools such as celts and axes, which may reflect an emerging woodworking industry.

Populations in Ontario during this period primarily utilized maritime landscapes during the spring, summer and fall seasons with large base camps on islands, near river mouths, and on the shores of embayment's where a variety of flora, fish, and wild fowl resources could be obtained. Smaller hunting and specialized campsites were also established in the uplands and along smaller watercourses.

During the Middle Archaic Period (6000 – 2000 BC) the environmental landscape continued to evolve with the jack pine forests prevalent during the Early Archaic Period being primarily replaced by white pine growth, suggesting a gradual increase in humidity and a continuation of hot summers (Teichroeb 2007).

The trend towards more diverse toolkits also continued into the Middle Archaic Period, as the presence of net-sinkers and fish weirs indicate that fishing was an important component of the subsistence strategy. Net-sinkers were typically used with both gill nets and seine nets, which were employed for both shoreline and offshore fishing activities. Gill nets were kept vertical with stone sinkers on the bottom and floats on the top and were often anchored to a specific location with the use of larger stones. Seine nets acted as fences and were used to corral and hold the fish and needed to be kept tight to the bottom of the water by attaching many closely spaced sinkers to the bottom of the net with floats attached to the top (Ingleman *et al* 2012; Prowse 2003). Many contemporary fishing nets were commonly made from hemp or nettle (Needs-Howarth 1999) and are rarely preserved in the archaeological record (Ingleman *et al* 2012).

The Middle Archaic also marks when bannerstones were first manufactured. Bannerstones are carefully crafted ground stone devices that served as a counterbalance for atlatls or spear-throwers. Another characteristic of the Middle Archaic is an increased reliance on local, sometimes lower-quality chert resources for the manufacturing of projectile points. During earlier periods, groups likely occupied large territories which may have increased access to a primary outcrop of high-quality chert during their seasonal round. However, during the Middle Archaic, groups who inhabited smaller territories may only have had access to lower quality materials which had been deposited by the glaciers in the local till and river gravels.

It was during the latter part of the Middle Archaic Period that long-distance trade routes began to develop, spanning the northeastern part of the continent. In particular, copper tools manufactured from a source located northwest of Lake Superior were being traded (Ellis, Kenyon and Spence 1990), with a wide range of copper tools such as socketed and tanged spear points, projectile points, harpoons, crescent knives, gouges, pikes and celts being produced during this period (Dawson 1983).

Trade networks established during the Middle Archaic Period also continued to flourish during the Late Archaic Period (2500-950 BC). Copper implements from northern Ontario and marine shell artifacts from the Mid-Atlantic coast have been frequently encountered in burial contexts (Ellis, Kenyon and Spence 1990; Ellis, Timmins and Martelle 2009).

During the Late Archaic the trend towards decreased territory size and a broadening subsistence base continued. In the archeological record, Late Archaic sites are more numerous than Early or Middle Archaic sites suggesting that populations were increasing. Regionalized variations during the Late Archaic Period are also reflected in projectile point manufacturing, with distinct locally diagnostic styles appearing. Other artifacts including polished stone pipes and banded slate gorgets also appear on Late Archaic Period sites, as well as "birdstones", which are small, bird-like effigies usually manufactured from green banded slate (Ellis, Kenyon and Spence 1990).

It is during the Late Archaic Period that defined cemeteries are identified. The appearance of burial pits during the Late Archaic Period has been interpreted as a possible response to increased population densities and

competition between local groups for access to resources. It has been theorized that cemeteries and burial grounds may have provided strong symbolic claims over a local territory and the surrounding resources and are often located within areas of elevated topography containing well-drained sandy and gravel soils adjacent to major watercourses. Burial sites reflect the importance of the landscape to Indigenous populations as they represent locations along travel routes that would be returned to, where feasts would occur, and the dead could be honoured (Taylor 2015).

2.1.3 Woodland Period

The Early Woodland Period (940 to 400 BC) is distinguished archaeologically from the Late Archaic Period primarily by the introduction of ceramic technology. The first pots were thick walled and friable, suggesting they may have primarily been used in the processing of nut oils by boiling crushed nut fragments in water and skimming off the oil (Spence, Pihl and Murphy 1990). These early vessels were not easily portable, and their fragile nature suggests they may have required regular replacement. There have also been numerous Early Woodland Period sites identified where ceramics were absent from the recovered assemblage, suggesting ceramic vessels may have not been completely integrated within the daily lives of Early Woodland Period populations.

Besides the addition of ceramic technology, the cultural affinity of Early Woodland Period inhabitants shows a great deal of continuity with the preceding Late Archaic Period. For instance, birdstones continued to be manufactured, although the Early Woodland Period varieties have "pop-eyes" that protrude from the sides of their heads (Spence, Pihl and Murphy 1990). Another example of general continuity from the terminal segment of the Archaic Period is represented by the thin, well-made projectile points, although the Early Woodland Period variants were side-notched rather than corner-notched, giving them a slightly altered and distinctive appearance (Spence, Pihl and Murphy 1990).

Evidence of exchange networks during the early stages of the Woodland Period indicate numerous reciprocal, down-the-line exchanges between trade partners located both short and long distances away. There is a gradual intensification of these types of trade throughout the period continuing into, and reaching its apex in, the Middle and Late Woodland Periods (Hartmann 1996). During the last 200 years of the Early Woodland Period, projectile points manufactured from high quality raw materials from the American Midwest begin to appear on sites in southwestern Ontario.

The Middle Woodland Period (300 BC to 500 AD) reflects an evolving transition from patterns observed from archaeological excavations documenting Archaic and Early Woodland Period sites. Middle Woodland peoples relied much more extensively on ceramic technology where vessels are often heavily decorated with impressed designs covering the entire exterior surface and upper portion of the vessel interior. Consequently, even very small fragments of Middle Woodland vessels are easily identifiable.

While Middle Woodland Period populations still relied on hunting and gathering to meet their subsistence requirements, an increased consumption of fish became an important dietary component. Some Middle Woodland Period sites have produced literally thousands of bones from spring spawning species including walleye and sucker (MCR 1981). Food sources such as shellfish, tree nuts and a proliferation of plant greens and seeds were also utilized during the Middle Woodland Period. The seasonal variety and relative dependability of these food sources encouraged population growth in many areas.

It is at the beginning of the Middle Woodland Period that rich, densely occupied sites appear along the margins of major rivers and lakes. While these areas had been utilized by earlier peoples, Middle Woodland sites are

significantly different in that the same location was occupied off and on for as long as several hundred years and large deposits of artifacts often accumulated. The land use patterns reflected from archaeological investigations of Middle Woodland Period sites generally reflect densely occupied locations that appear on the valley floor of major rivers, often producing sites with significant artifact deposits. Unlike earlier seasonally utilized locations, many Middle Woodland Period sites appear to have functioned as base camps, occupied periodically over the course of the year and situated to take advantage of the greatest number of resources. There are also numerous small upland Middle Woodland Period sites, many of which can be interpreted as special purpose camps where localized natural resources were utilized (MCR 1981).

The Late Woodland Period began with a shift in settlement and subsistence patterns involving an increasing reliance on corn horticulture (Fox 1990:185; Smith 1990; Williamson 1990:312). Corn may have been introduced into southwestern Ontario from the American Midwest as early as AD 600 or a few centuries before. However, corn did not become a dietary stapleuntil at least three to four hundred years later, and then the cultivation of corn gradually spread into south-central and southeastern Ontario.

During the early Late Woodland, particularly within the Princess Point Complex (circa AD 500-1050), a number of archaeological material changes have been noted: the appearance of triangular projectile point styles, first seen during this period begin with the Levanna form; cord-wrapped stick decorated ceramics using the paddle and anvil forming technique replace the mainly coil-manufactured and dentate stamped and pseudo-scallop shell impressed ceramics; and if not appearance, increasing use of maize (Zea mays) as a food source (Bursey 1995; Crawford et al. 1997; Ferris and Spence 1995:103; Martin 2004 [2007]; Ritchie 1971:31-32; Spence et al. 1990; Williamson 1990:299). Aside from projectile points, Princess Point Complex assemblages are predominantly characterized by informal or expedient flake tools and ground stone and bone artifacts are rare (Ferris and Spence 1995:103; Shen 2000).

The Late Woodland Period is considered to coincide with the beginning of agricultural life ways in southern Ontario. Researchers have suggested that a warming trend during this time may have encouraged the spread of maize into this part of the province, providing a greater number of frost-free days (Stothers and Yarnell 1977). Further, shifts in the location of sites have also been identified with an emphasis on riverine, lacustrine and wetland occupations set against a more diffuse use of the landscape during the Middle Woodland (Dieterman 2001). These locations may have provided nutrient-rich soil for agriculture, while growing sedentism is seen as a departure from Middle Woodland hunting and gathering and may reflect growing investment in the care of garden plots of maize (Smith 1997:15).

The first agricultural villages documented in the archaeological record in southern Ontario have been dated to the 10th century. Unlike the riverine base camps of the Middle Woodland Period, these sites are located in upland locations on well-drained sandy soils. Identified archaeologically as "Early Late Woodland" (AD 900-1300), it is suggested that these early populations were ancestral to the Iroquoian groups which later inhabited southern Ontario at the time of first European contact.

Village sites dating between AD 900 and 1300 share many attributes with the historically investigated Iroquoian sites, including the presence of longhouses and sometimes palisades. These early longhouses averaged 12.4 m in length (Dodd et al. 1990:349; Williamson 1990:304-305). It is also quite common to find the outlines of overlapping house structures, suggesting that these villages were occupied long enough to necessitate rebuilding. The Jesuits reported that the Huron moved their villages once every 10-15 years, when the nearby soils had been depleted by farming and conveniently collected firewood grew scarce (Pearce 2018). It seems likely that Early Late Woodland peoples lived in villages for considerably longer, as they relied less heavily on corn than did later groups, and their villages were much smaller, placing less demand on nearby resources.

Judging by the presence of carbonized corn kernels and cob fragments recovered from sub-floor storage pits, agriculture was becoming a vital part of the early Late Woodland economy. However, it had not reached the level of importance it would during the middle Late and late Late Woodland Periods. There is ample evidence to suggest that more traditional resources continued to be utitlized and comprised a large part of the subsistence economy. Seasonally occupied special purpose sites relating to deer procurement, nut collection, and fishing activities, have all been identified. While beans are known to have been cultivated later in the Late Woodland Period, they have yet to be identified on early Late Woodland sites.

The middle Late Woodland Period (AD 1300-1400) witnessed several interesting developments in terms of settlement patterns and artifact assemblages. Changes in ceramic styles have been carefully documented, allowing the placement of sites in the first or second half of this 100-year period. Moreover, villages, which averaged approximately 0.6 hectares in extent during the early Late Woodland, now consistently range between one and two hectares.

House lengths also change dramatically, more than doubling to an average of 30 m, while houses of up to 45 m have been documented. This increase in longhouse length has been variously interpreted. The simplest possibility is that increased house length is the result of a gradual, natural increase in population (Dodd et al. 1990:323, 350, 357; Smith 1990). However, this does not account for the sudden shift in longhouse lengths around AD 1300. Other possible explanations involve changes in economic and socio-political organization (Dodd et al. 1990:357). One suggestion is that during the middle Late Woodland Period small villages were amalgamating to form larger communities for mutual defense (Dodd et al. 1990:357). If this was the case, the more successful military leaders may have been able to absorb some of the smaller family groups into their households, thereby requiring longer structures. This hypothesis draws support from the fact that some sites had up to seven rows of palisades, indicating at least an occasional need for strong defensive measures. There are, however, other middle Late Woodland villages which had no palisades present (Dodd et al. 1990). More research is required to evaluate these competing interpretations.

The lay-out of houses within villages also changes dramatically by AD 1300. During the early Late Woodland Period villages were planned with houses oriented in various directions. During the middle Late Woodland Period villages are organized into two or more discrete groups of tightly spaced, parallel aligned, longhouses. It has been suggested that this change in village organization may indicate the initial development of the clans which were a characteristic of the historically known Iroquoian peoples (Dodd et al. 1990:358).

Initially at least, the Late Woodland Period (AD 1400-1650) continues many of the trends which have been documented for the proceeding century. For instance, between AD 1400 and 1450 house lengths continue to grow, reaching an average length of 62 m. One longhouse excavated on a site southwest of Kitchener was an incredible 123 m (Lennox and Fitzgerald 1990:444-445). After AD 1450, house lengths begin to decrease, with houses dating between AD 1500 and 1580 averaging 30 m in length.

As to why house lengths decrease after AD 1450 is still being investigated, though it is understood that the shorter houses witnessed on Historical Period sites can be at least partially attributed to the population reductions associated with the introduction of European diseases such as smallpox (Lennox and Fitzgerald 1990:405, 410).

Village size also continues to expand throughout the Late Woodland Period, with many of the larger villages showing signs of periodic expansions. The middle Late Woodland Period and the first century of the late Late Woodland Period was a time of village amalgamation. One large village situated just north of Toronto has been shown to have expanded on no fewer than five occasions. These large villages were often heavily defended with

numerous rows of wooden palisades, suggesting that defence may have been one of the rationales for smaller groups banding together. A pattern of Late Woodland village expansion has been clearly documented at several sites throughout southwestern and south-central Ontario (Anderson 2009).

Not all First Nations within southern Ontario resided within villages during the Late Woodland Period, as some communities continued to live in areas along waterways during the summer months and inland hunting sites during the winter.

Early contact with European settlers at the end of the Late Woodland Period resulted in changes to the traditional lifestyles of most Indigenous populations inhabiting Ontario including settlement size, population distribution, and material culture. The introduction of European-borne diseases significantly increased mortality rates, resulting in a drastic decrease in population size (Warrick 2000).

2.2 Post-Contact Indigenous Occupation of Southern Ontario

The post-contact Indigenous occupation of southern Ontario was heavily influenced by the dispersal of various Iroquoian-speaking peoples by the nations of the Haudenosaunee Confederacy, and the subsequent arrival of Algonkian-speaking groups from northern Ontario at the end of the 17th century and beginning of the 18th century (Schmalz 1991).

Following the introduction of Europeans to North America, the nature of Indigenous settlement size, population distribution, and material culture shifted as settlers began to colonize the land. Despite this shift, "written accounts of material life and livelihood, the correlation of historically recovered villages to their archaeological manifestations, and the similarities of those sites to more ancient sites have revealed an antiquity to documented cultural expressions that confirms a deep historical continuity to Indigenous systems of ideology and thought" (Ferris 2009:114). As a result, Indigenous peoples of southern Ontario have left behind archaeologically significant resources that show continuity with past peoples, even if this connection has not been recorded in historical Euro-Canadian documentation.

During the late 1600s and early 1700s, French explorers and missionaries reported a large population of Iroquoian peoples clustered around the western end of Lake Ontario. The part of this area that is now referred to as the Peel Region was known to have been populated by the ancestors of two Late Woodland groups who would become historically referred to as the Neutral (Attawandaron) and Huron nations.

2.3 Historical Euro-Canadian Period

2.3.1 Township of Caledon, County of Peel

The Study Area is located within part of the Mississauga Tract which was ceded to the British by the Mississaugas on the 28th of October 1818, under Treaty 19, for £522 and 10 shillings annually. Treaty 19 was the "Second Purchase" involving the Tract of which the "First Purchase" or "Mississauga Purchase" of 1805 allowed the British Crown to acquire over 74,000 acres of land in southern Peel County. Treaty 19 transferred an additional 648,000 acres of the Tract to the British who in 1819 surveyed the area and divided it into the townships of Toronto, Chinguacousy, Caledon, Albion and Toronto Gore (PAMA 2014).

Albion, Caledon and Chinguacousy Townships began settlement in 1820 with Caledon and Chinguacousy consisting of six concessions on both the east and west sides of Centre Road. According to George Walton's 1842 *Walton's Home District Directory*, the population of Caledon Township that year was 1,920. The 1870s saw the creation of railway lines east of the study area for the Credit Valley Railway (CVR) and Toronto Grey & Bruce

Railway (both acquired by the Canadian Pacific Railway [CPR] in 1884). Caledon Township was bound on the east by Albion Township, on the south by Chinguacousy Township, on the west by Erin Township in the County of Wellington, and on the north-west by Garafraxa Township also in the County of Wellington (Lynch 1874).

Events in Europe during the mid-19th century dramatically improved the fortunes for Caledon Township and the surrounding county. A combination of failed harvests and disrupted trade routes caused by the Crimean War suddenly created a market for Canadian wheat producers, then centred in Ontario, to meet global demand. Simultaneously, the 1854 Canadian American Reciprocity Treaty prompted farmers to also take up livestock rearing for export to the United States (Scheinman 2009). Getting these products to consumers was aided by the new railway lines.

At the opening of the 20th century, economic development in Caledon Township, like that of adjacent counties and townships, relied on the prosperity of nearby Toronto and exports to the United States and Britain. Following World War II, the widespread use of motor vehicles brought changes to urban and rural development. As vehicular traffic increased, the network of roadways throughout the region improved, providing Caledon Township and its communities with better connections to the growing metropolis of Toronto.

Significant new growth and development has occurred in Peel County over the past four decades. When it became the Regional Municipality of Peel in 1974, Caledon Township along with Albion Township and the north half of Chinguacousy Township were incorporated into the new Town of Caledon. In that year, there were 334,750 people living in Peel Region and by 2014 the population numbered 1,350,000 (Neill 2015). The 2016 census recorded Peel's population at 1,381,739, of which 66,502 were residents of Caledon.

2.3.2 Study Area Specific History

Though Location 18 (AkHa-31) is located exclusively within Part of Lot 17, Concession 4 WSCR, all lots within the Study Area are initially discussed below to aid in a comprehensive overview of the history of the lands surrounding the site. This is followed by a discussion of Lot 17, Concession 4 WSCR more specifically.

A review of historical county maps, topographic maps, and aerial imagery, chart the 19th and 20th century development of the Study Area. The earliest cartographic resource consulted was George Tremaine's 1859 *Tremaine's Map of the County of Peel, Canada West* (Tremaine 1859) (Map 3). This map suggests the alignments for present-day Main Street and Mississauga Road are nearly identical to the original concession roads at that time. The 1859 map also depicts the Credit River east of the Study Area and branches of the Credit River flowing adjacent to the north portion of the Study Area (Map 3).

At the northeast end of the Study Area, the 1859 map portrays the "Coulter Estate" while near the south end of the Study Area, the village of "Church's Falls" is visible. These appear to be the predecessors of the present-day communities of Coulterville and Cataract, respectively. Furthermore, two structures (likely farmhouses) are illustrated within the Study Area on the 1859 map (Map 3). The northwestern-most farmhouse is within the property of Duncan Cameron (Lot 17, Concession 4 WSCR) and appears to be situated in the same location as the present-day house at 18667 Mississauga Road. The southernmost farmhouse is within the property of James Cameron (Lot 16, Concession 4 WSCR) and appears to be situated in the same location as the present-day house at 18501 Mississauga Road.

Nearly two decades later, J.H. Pope's 1877 *Illustrated Historical Atlas of the County of Peel* (Pope 1877) depicts the Lot 16 side road as similar to the present-day alignment for Charleston Sideroad. Furthermore, the Credit River and its branches are portrayed as traversing similar paths to those of 1859 and the Coulterville Estate

remains at the northeast end of the Study Area. Notable changes include the renaming of the village of Church's Falls (near the south end of the Study Area) to "Cataract" and the establishment of the CVR along the northeast perimeter of the Study Area (Map 3).

The 1877 map still illustrates the same two farmhouses shown in the 1859 map but also presents orchards adjacent to each structure. In addition to these t farmhouses, five new (or newly illustrated) individual structures are depicted in the Study Area on the 1877 map. The new individual structures include four labeled "residences" (farmhouses) and one "school house" as depicted in the 1877 map (Map 3).

From north to south, the first new farmhouse as well as the schoolhouse are located in Lot 16, Concession 3 WSCR, as part of the Coulter Estate, while the second new farmhouse is located in the east corner of Lot 16, Concession 4 WSCR, still listed as the property of James Cameron and situated near the location of the present-day house at 1420 Charleston Sideroad. The third new farmhouse also has an accompanying orchard and is located in the northeast half of Lot 15, Concession 4 WSCR, listed as the property of Thomas McNicholl, while the fourth new farmhouse is located in the southwest half of the same lot, listed as part of the Morris Estate and situated in the same location as the present-day remnants/ foundation at 1055 Charleston Sideroad (Map 3).

Available topographic maps and aerial images document the evolution of the Study Area during the 20th century. The 1937 and 1952 versions of the *Topographic Map, Ontario – Orangeville Sheet* by the Department of National Defence (Ontario Council of University Libraries [OCUL] n.d.) provide a more accurate representation of the waterbodies in the Study Area and suggest that branches of the Credit River flow through the west portion of the Study Area as well as to the east of the Study Area. The 1937 and 1952 maps also suggest that six of the seven farmhouses portrayed within the Study Area in 1877 (or versions of them) were still extant and, furthermore, were accompanied by associated barns and/ or outbuildings (Map 4). While the farmhouse on the former Coulter Estate appears to have been replaced with a structure closer to the Lot 16 side road, the schoolhouse on the former property is still illustrated and appears to be situated in the same location as the present-day house at 1626 Charleston Sideroad, just outside of the current Study Area. Another notable change from the 1877 map is the conversion of the former CVR to the CPR (a transition that occurred in 1884, see Section 1.2.3.1) (Map 4).

A 1954 aerial photograph by the Department of Lands and Forests (McMaster University Library 2023) presents the Study Area as identical to the previous topographic maps and confirms the majority of the Study Area remained rural agricultural land with tracts of woodlots interspersed throughout (Map 5). While the number of outbuildings/ barns have changed for the several farmhouses illustrated in the 1877, 1937 and 1952 maps, the main houses still appear to be extant within the Study Area on the 1973 map. Furthermore, Charleston Sideroad appears to have been modified to its present-day alignment and the CPR line remains visible on the 1973 map (Map 5). Though northern portions of the CPR line were decommissioned by 1996, the Brampton-Orangeville Railway was created in 2000 and has been operating freight traffic and a tour train on the line from Streetsville to Orangeville maintaining the use of the rail corridor near the Study Area to the present-day (Town of Caledon 2009).

2.3.2.1 Lot 17, Concession 4 WSCR

Lot 17, Concession 4 WSCR was originally wooded with maple, elm, beech, and bass, and the soil was a black loam (PAMA n.d., Reel 08, 0663). The patent for the 200-acre Lot 17 was granted to John Johnson Brown in 1822 as a United Empire Loyalist (U.E.L.) land grant (Ontario Land Registry, n.d.(a), 308). John J. Brown was one of five children - four sons and one daughter - of Joseph Brown, a U.E.L. who served in Butler's Rangers during the Revolutionary War and moved to Grantham Township, Lincoln County, Canada in 1784. All five of Joseph's

children located their U.E.L. grants in Caledon West and were among the pioneers of the township (PAMA n.d., Reel 08, 0691).

John J. and his wife (a Miss MacDonald) sold Lot 17 to Duncan Cameron for £150 in May 1846 (Ontario Land Registry, n.d.(a), 308). Cameron was a Scottish immigrant; born in 1816, Duncan arrived in Canada with his parents John and Helen Cameron, his five brothers, and two sisters, in 1828. The Camerons had seven sons, but one, David, died on the journey across the Atlantic (PAMA, n.d., 8509). The family settled at Lot 16, Concession 4 WSCR in 1836. When Duncan purchased the adjacent Lot 17 in 1846, he was about 30 years old.

Tremaine's 1859 Map of the County of Peel, Canada shows Duncan Cameron as owner of the entire 200 acres of Lot 17, and a house located near the south-southwest corner of the property, set back from both the concession and adjacent Lot 16 (Tremaine 1859, Map 3). The 1861 Census shows Duncan (45) living with his wife Catherine Cameron (nee. Shaw, 32) seven daughters (ages 4 to 15), and Catherine Shaw (75), possibly his mother-in-law (1861 Personal Census, District 6, Caledon, 80). The Agricultural Census of the same years shows Duncan with 200 acres, of which 130 were cultivated, 100 being crop (41 wheat, 5 peas, 12 oats, 1 potatoes, 1 turnips), and 30 pasture; the farm had a total value of \$5500 (1861 Agricultural Census, District 6, Caledon, 85).

The 1871 Census provides additional details about the Cameron family. Duncan (54) and Catherine (44) expanded their family to 10 children: Helen (25), Katie (22), Mary (20), Maggie (18), Sarah (16), Flora (14), Duncan (9), James (7), and Marjory (4). The Camerons were Baptists (1871 Census, Schedule 1, Cardwell 40/A, Caledon No.4, 43). Along with Lot 17, Duncan Cameron was owner of two town building lots, and two houses (1871 Census, Schedule 3, 8). The farmland appears to have remained the same with 200 acres, 130 improved (30 wheat, 1 potatoes, 25 hay), 25 pasture, 1½ orchard (1871 Census, Schedule 4, 8). Other assets and products of the farm included 4 horses, 1 colts/fillies, 8 milch cows, 14 other horned cattle, 60 sheep, 10 swine, 6 beehives and yearly production of 600 pounds butter, 100 pounds cheese, 35 pounds honey, and 200 pounds wool (1871 Census, Schedule 5, 8).

J.H. Pope's 1877 *Illustrated Historical Atlas of the County of Peel* map shows Duncan Cameron as owner of the whole 200 acres of Lot 17, with a house located on the southwest half of the property (Walker and Miles 1877, Map 3). This house was illustrated to the northwest of the house location on the 1859 map (Tremaine 1859), although this could be a discrepancy in the recording. The orchards on the property are shown to the east of the house. A June 1898 article in the Orangeville Banner reports the death of a young man, Joseph Flaherty, at a barn raising on the property of a Duncan Cameron, three miles south of Alton, which may be Lot 17 (PAMA n.d., 8482).

Duncan Cameron remained the owner of Lot 17 until his death in 1902; his will was entered into land registry on October 15 of that year. Execution of Cameron's will divided the acreage of Lot 17 equally between his two sons, with the southwest half, including the original house, going to the elder son Duncan A. and the northeast half to the younger son James A. (Ontario Land Registry n.d.(b), 433).

3.0 ARCHAEOLOGICAL CONTEXT

3.1.1 Existing Conditions

The Study Area is located in a rural part of the Town of Caledon, generally bounded by Mississauga Road to the south, the CP Railway to the north, the western edge of Lot 14, Concession 4 WSCR to the east, and the eastern edge of Lot 18, Concession 4 WSCR to the west. Charleston Sideroad, or Highway 24, is a northeast-southwest road that bisects the Study Area, with approximately two thirds north of the highway and one third to the south. The Study Area is comprised of active agricultural lands, wooded areas, overgrown farmland, including pasture and meadows, as well as residential lots and farm complexes. The Study Area is surrounded by farmland and wooded areas to the south and west, the TPC Toronto at Osprey Valley Golf Course to the north, and the hamlet of Cataract and Forks of the Credit Provincial Park to the east.

Location 18 (AkHa-31) is situated in the southwestern portion of the Study Area within a residential lot/farm complex and the adjacent agricultural field to the west. It is approximately 200 m northeast of Mississauga Road and 785 m northwest of Charleston Sideroad (Supplementary Documentation; Map SD1).

3.1.2 Physiography

The Study Area is situated entirely within the "Guelph Drumlin Field" physiographic region (Chapman and Putnam 1984:137).

The drumlins of this field are not so closely grouped as those of some other areas and there is more intervening low ground, which is largely occupied by fluvial materials. The till in these drumlins is loamy and calcareous, and was derived mostly from dolostone of the Amabel Formation so strategically exposed along the Niagara Cuesta...The till throughout is rather stony, with large surface boulders being more numerous in some localities than others...The ice which moulded this drumlin field advanced from the southeast and the front of the melting receding glacier was at right angles to this, that is, down slope of the plain. The drainage of the ice front was consequently able to find progressively lower and lower outlets, so that the drumlin field is furrowed by more or less parallel valleys running almost at right angles to the trend of the drumlins themselves. There are also numerous interconnecting cross valleys which occupy deeper depressions between drumlins. Along the sides of these valleys there are broad sand and gravel terraces, while the bottoms are often swampy...Incidental to this pattern are the several gravel ridges or eskers which cross the plain in the same general direction as the drumlins.

(Chapman and Putnam 1984:137-138)

The localized topography of the Study Area is generally flat and is approximately 390 to 420 m above sea level. The soils of the Study Area are comprised primarily of Dumfries Loam and Caledon Loam, with a small section of Gilford loam at the western extent. Dumfries soils consist of well drained dark gray-brown loam or sandy loam with a high stone content, commonly used for cultivation of cereal grains, legumes, hay and pasture (Hoffman and Richards 1953). Caledon and Gilford soils both occur as gravelly outwash plains, but Caledon Loam is the well drained member, whereas Gilford Loam is the poorly drained member. Caledon soils consist of very dark grey-brown loam and are used for the cultivation of cereal grains, hay and pasture. Gilford soils consist of very dark grey loam and are primarily used for pastures and woodlots. These three soils tend to require additional fertilizer to maintain adequate organic matter levels, as well as mitigating the hazards of erosion and large stones to cultivation practices (Hoffman and Richards 1953).

The soil within Location 18 (AkHa-31) is comprised of Gilford loam with moderate compaction.

The closest potable water source is a small unnamed drainage that is situated approximately 40 m to the southwest of the site. This small unnamed drainage runs adjacent to the southern edge of Location 18 (AkHa-31). The Credit River Watershed spans 1000 km² and drains into Lake Ontario at the Port Credit, Mississauga waterfront (Credit Valley Conservation 2022).

The bedrock deposits in the vicinity date to the Middle and Lower Silurian Periods and consist of the Lockport-Amabel Formation (Hewitt 1972). The Guelph-Lockport Dolomites form the cap of the Niagara Escarpment, outcropping from Niagara Falls though Dundas and Guelph up to the Bruce Peninsula. The Lockport Dolomites consists of three members: Gasport Dolimitic Limestone, Goat Island Dolomite and Eramosa Dolomite. Similarly, the Amabel Formation also consists of three members, including: a finer crystalline blocky dolomite named Lions Head Member, a fine to medium crystalline dolomite named Wiarton Member, and a brown, thin-bedded fine crystalline dolomite named Eramosa Member (Hewitt 1972).

The Study Area lies within the Mixed-wood Plains ecozone of Ontario (The Canadian Atlas Online 2015). Although largely altered by recent human activity, this ecozone once supported a wide variety of deciduous trees, such as various species of ash, birch, chestnut, hickory, oak, and walnut, as well as a variety of birds and small to large land mammals, such as raccoon, red fox, white tailed deer, and black bear.

3.1.3 Registered Archaeological Sites

To compile an inventory of previously documented archaeological resources, the registered archaeological site records maintained by the MCM in the Ontario Archaeological Site Database (OASD) was consulted.

A total of nine registered archaeological sites are located within 1 km of Location 18 (AkHa-31), and all of these sites are situated within the current Study Area. Three of the sites, Location 16 (AkHa-30), Location 4 (AkHa-25), and Location 7 (AkHa-26) are located within 300 m of Location 18 (AkHa-31). Section 3.1.4.2 below provides further details on the registered sites identified during the Stage 1 and 2 AA of the Study Area.

Table 2: Registered archaeological sites within 1 km of Location 18 (AkHa-31)

| | | · | |
|---------------|-------------|---|--------------|
| Borden Number | Site Name | Affinity | Site Type |
| AkHa-26* | Location 7 | Post-Contact | agricultural |
| AkHa-32 | Location 22 | Pre-Contact Indigenous; Early Woodland, Late Woodland | scatter |
| AkHa-34 | Location 27 | Post-Contact | agricultural |
| AkHa-30* | Location 16 | Pre-Contact Indigenous | scatter |
| AkHa-29 | Location 12 | Post-Contact | midden |
| AkHa-28 | Location 10 | Pre-Contact Indigenous; Early Archaic | findspot |
| AkHa-27 | Location 9 | Post-Contact | midden |
| AkHa-25* | Location 4 | Post-Contact | agricultural |
| AkHa-24 | Location 2 | Post-Contact | agricultural |

[&]quot;" denotes sites located within 300 m

3.1.4 Previous Archaeological Assessments

Per Section 1.1., Standard 1. of the MCM (Government of Ontario 2011), a review of previous archaeological assessments undertaken within the limits of the Study Area or within 50 m of the Study Area was assessed. To WSP's knowledge, one previous archaeological assessment has been documented within the 50 m threshold and two previous archaeological assessments have been documented for the current Study Area.

3.1.4.1 Previous Assessments within 50 m of the Study Area

In 2017, Archaeological Research Associates Ltd. (ARA) conducted a Stage 1 and 2 Archaeological Assessment of a study area approximately 0.51 ha in size to satisfy Infrastructure Ontario's due diligence requirements in advance of the planned disposition of the property. The study area for this assessment is adjacent to Charleston Sideroad to the north and is located centrally between portions of the current Study Area. The Stage 1 identified areas of archaeological potential and areas of previous disturbance, and the Stage 2 consisted of test pit survey at 5 m intervals that did not result in the identification of any archaeological locations. No further work was recommended for this property (ARA 2017).

3.1.4.2 Previous Assessments of the Study Area

In 2001, Archaeological Assessments Ltd. conducted a Stage 1 and 2 Archaeological Assessment within the limits of the current Study Area, on part of the eastern halves of Lots 16, 17, and 18, Concession 4 WSCR, in advance of the proposed Osprey Valley West Golf Course. The size of the study area was approximately 89 ha, of which 69 ha was cultivated agricultural lands assessed by pedestrian survey at 5 m intervals, and 20 ha was mixed scrub and woodland assessed by test pit survey at 10 m intervals (Archaeological Assessments Ltd. 2001).

The Stage 1 and 2 assessment resulted in the identification of three archaeological locations, two pre-contact Indigenous findspots and one historical Euro-Canadian homestead, registered as the Cameron Site (AlHa-9). The first pre-contact Indigenous findspot consisted of a bifacially worked scraper and the second consisted of a large, finished biface, both manufactured on Onondaga chert. These two findspots were judged to have low cultural heritage value or interest, and no further archaeological assessments were recommended for either location (Archaeological Assessments Ltd. 2001).

The Cameron Site (AlHa-9) was identified during the pedestrian survey of a ploughed agricultural field, located in the northeastern portion of the east half of Lot 16, Concession 4 WSCR. The site measured approximately 27 m north-south by 75 m east-west and produced a total of 66 historical Euro-Canadian artifacts, primarily household ceramics and glass. The Cameron Site (AlHa-9) was interpreted as a mid-19th century Euro-Canadian homestead occupied by the Cameron family until the early to mid-20th century. Historical archival research indicates that James Cameron occupied the site from the 1850s to 1870s, while the 1877 Historical Atlas Map of Caledon Township (Map 3) indicates a structure in the northeastern corner of Lot 16 that corresponds to the same location as the Cameron Site (AlHa-9). As such, the Cameron Site (AlHa-9) was determined to have further cultural heritage value and interest and was recommended for Stage 4 mitigation if avoidance and protection was not possible (Archaeological Assessments Ltd. 2001).

Golder completed the Stage 1 and 2 AA for the current Study Area in the fall of 2020, and spring and summer of 2021 (Golder 2022). The results of the Stage 1 assessment identified archaeological potential within the Study Area for both pre-contact Indigenous and historical Euro-Canadian sites. This determination is based on the presence of well-drained soils, proximity to water sources such as the Credit River, as well as the proximity to registered archaeological sites (e.g., Cameron Site (AlHa-9) found in 2001) and areas of Euro-Canadian settlement dating back to the mid-19th century. Areas of archaeological potential within the Study Area were

subject to survey during the Stage 2 AA through a combination of shovel test pit survey and pedestrian survey at 5 m intervals. The Stage 2 assessment resulted in the identification of 29 artifact producing locations, of which 18 are pre-contact Indigenous sites or findspots and 11 are historical Euro-Canadian sites. Of the 29 archaeological producing locations, a total of 15 (Locations 3, 5, 6, 8, 11, 14, 19, 20, 21, 23, 24, 25, and 28) consisted of either a small amount of historical material or a single piece of lithic debitage, biface or scraper. Given the isolated nature of the finds, these locations were concluded to have no further CHVI as the sites do not meet the criteria identified in Section 2.2, Standards 1a-c, of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for determining the need for Stage 3 AA. Similarly, Location 29 was interpreted to be an isolated, intermixed deposit of historical and modern material, mostly consisting of wire-drawn and machine cut nails, and, as such, was considered sufficiently documented with no further CHVI. The remaining 13 sites (Locations 1, 2, 4, 7, 9, 10, 12, 15, 16, 18, 22, 26, and 27) were registered with the MCM, under the Borden system, in accordance with *Section 7.12, Standards 1.a.* and *1.c.* of the MCM (2011) and will be discussed in further detail below.

Location 1 (AkHa-23) consisted of 1,561 historical Euro-Canadian artifacts, 69 faunal elements, and one piece of lithic debitage, recovered from 35 positive test pits, one 1 m² test unit, and 55 CSP points in an area measuring approximately 80 m by 75 m. Given that there are at least 20 artifacts that date Location 1 (AkHa-23) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century and may be associated with a nearby former structure and orchard on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA. The single pre-contact Indigenous artifact was concluded to have no further CHVI as it did not meet the criteria Section 2.2, Standards 1a or b of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for recommending Stage 3 AA.

Location 2 (AkHa-24) consisted of 220 historical Euro-Canadian artifacts and 15 faunal elements, recovered from 26 positive test pits and 65 CSP points in an area measuring approximately 90 m by 60 m. Given that there are at least 20 artifacts that date Location 2 (AkHa-24) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century and can be tied to a structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 4 (AkHa-25) consisted of 32 historical Euro-Canadian artifacts and five faunal elements, recovered from recovered from 19 positive test pits in an area measuring approximately 45 m by 35 m. Given that there are at least 20 artifacts that date Location 4 (AkHa-25) to before 1900, and the fact that the location of the site has been occupied since the mid-19th century and can be tied to a nearby structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 7 (AkHa-26) consisted of 248 historical Euro-Canadian artifacts and six faunal elements, recovered from recovered from 53 positive test pits in an area measuring approximately 70 m by 60 m. Given that there are at least 20 artifacts that date Location 7 (AkHa-26) to before 1900, and the fact that the location of the site has been occupied since the mid-19th century and can be tied to a nearby structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant*

Archaeologists (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 9 (AkHa-27) consisted of 44 historical Euro-Canadian artifacts recovered from an area measuring approximately 35 m by 45 m. Given that there are at least 20 artifacts that date Location 9 (AkHa-27) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA.

Location 10 (AkHa-28) consists of single Early Archaic Nettling projectile point (8000 - 6000 BC) (OAS 1980), manufactured on Haldimand chert. As Location 10 (AkHa-28) met the criteria identified in Section 2.2, Standard 1a and b of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for recommending Stage 3 AA, it is concluded to have further CHVI.

Location 12 (AkHa-29) consisted of 40 historical Euro-Canadian artifacts recovered from an area measuring approximately 35 m by 35 m. Given that there are at least 20 artifacts that date Location 12 (AkHa-29) to before 1900, and the fact that the location of the site has been occupied since the mid to late 19th century, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 15 (AlHa-52) consisted of 208 historical Euro-Canadian artifacts and one faunal element, recovered from an area measuring approximately 45 m by 50 m. Given that there are at least 20 artifacts that date Location 15 (AlHa-52) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 16 (AkHa-30) consisted of nine pieces of lithic debitage recovered over an area measuring approximately 20 m by 25 m. As Location 16 (AkHa-30) met the criteria identified in Section 2.2, Standard 1a of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for recommending Stage 3 AA, it is concluded to have further CHVI.

Location 18 (AkHa-31), the site to which this report pertains, consisted of 771 historical Euro-Canadian artifacts, 69 faunal elements, and one piece of lithic debitage, recovered from 80 positive test pits and 100 CSP points in an area measuring approximately 95 m by 85 m. Given that there are at least 20 artifacts that date Location 18 (AkHa-31) to before 1900, and the fact that the location of the site has been occupied since the mid to late 19th century and can be tied to a structure and orchard on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore required to undergo Stage 3 AA. The single pre-contact Indigenous artifact is concluded to have no further CHVI as it does not meet the criteria Section 2.2, Standards 1a or b of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for recommending Stage 3 site-specific assessment.

Location 22 (AkHa-32) consisted of 20 pre-contact Indigenous artifacts including 17 pieces of lithic debitage, two projectile points, and one utilized flake, recovered from an area measuring 20 m by 25 m. As Location 22 (AkHa-

32) met the criteria identified in Section 2.2, Standard 1a of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011) for requiring Stage 3 AA, it was concluded to have further CHVI.

Location 26 (AkHa-33) consisted of five pieces of lithic debitage recovered over an area measuring 5 m by 5 m. As Location 26 (AkHa-33) met the criteria identified in Section 2.2, Standard 1a of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for recommending Stage 3 AA, it is concluded to have further CHVI.

Location 27 (AkHa-34) includes 109 historical Euro-Canadian artifacts and nine faunal elements, recovered from 19 positive test pits across an area measuring approximately 40 m by 30 m. Given that there are at least 20 artifacts that date Location 27 (AkHa-34) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century and can be tied to a structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA.

The re-established Cameron Site (AlHa-9) consisted of 66 historical Euro-Canadian artifacts recovered over an area measuring approximately 27 m north-south by 75 m east-west. Given that there are at least 20 artifacts that date the Cameron Site (AlHa-9) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century and can be tied to a structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA.

Based on the Stage 1 and 2 AA results, the following recommendations were provided (Golder 2022):

- Euro-Canadian sites, including Location 1 (AkHa-23), Location 2 (AkHa-24), Location 4 (AkHa-25), Location 7 (AkHa-26), Location 9 (AkHa-27), Location 12 (AkHa-29), Location 15 (AlHa-52), Location 18 (AkHa-31), Location 27 (AkHa-34), and the Cameron Site (AlHa-9) should be subject to Stage 3 Archaeological Assessment prior to any intrusive activity. The assessments should include researching all historical documentation sources listed Section 3.1 of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011), as well as any additional relevant sources. Research should also incorporate available historical and municipal information for existing heritage structures or architectural remains that may be related to the archaeological site. Subsequent Stage 3 Archaeological Assessment fieldwork should begin with a controlled surface pick-up (CSP), if applicable, and if not previously done as part of the Stage 2 survey. With the exception of the Cameron Site (AlHa-9), all other Euro-Canadian sites requiring Stage 3 Archaeological Assessment were subject to a CSP as part of the Stage 2 survey. Stage 3 test unit excavation at each Euro-Canadian site should begin by following the standards for Rural Historical Farmsteads as outlined in the MTCS's bulletin 19th Century Rural Historical Farmstead Sites (MHSTCI 2021) and Section 3.2.3 and Table 3.1, Standards 3-4, of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011). All fieldwork for the Stage 3 Archaeological Assessments should be completed in accordance with the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011).
- 2) Pre-contact Indigenous sites, including Location 10 (AkHa-28), Location 16 (AkHa-30), Location 22 (AkHa-32), and Location 26 (AkHa-33) should be subject to Stage 3 Archaeological Assessment prior to any intrusive activity. The assessments should consist of the hand excavation of 1 m² test units that are placed

across the sites to meet the objectives outlined in **Section 3.2.3 and Table 3.1, Standards 1-2**, in the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011). Location 10 (AkHa-28), Location 16 (AkHa-30), and Location 22 (AkHa-32) were each subject to a CSP that met all requirements outlined in Section 3.2.1 of the MTCS's Standards and Guidelines for Consultant Archaeologists; therefore, a CSP for these archaeological locations is not required prior to Stage 3 test unit excavation. Location 26 (AkHa-33) was identified during test pit survey and does not require a CSP. All fieldwork for the Stage 3 Archaeological Assessments should be completed in accordance with the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011).

- 3) Locations 3, 5, 6, 8, 11, 13, 14, 17, 19, 20, 21, 23, 24, 25, 28, and 29 as well as the pre-contact Indigenous components of Location 1 (AkHa-23) and Location 18 (AkHa-31) have been sufficiently assessed and documented, and no further archaeological assessment is recommended for these locations or components.
- 4) No further archaeological assessment is recommended for portions of the Study Area that were subject to Stage 2 Archaeological Assessment and no archaeological sites or resources were identified.
- 5) Until such time that Location 1 (AkHa-23), Location 2 (AkHa-24), Location 4 (AkHa-25), Location 7 (AkHa-26), Location 9 (AkHa-27), Location 10 (AkHa-28), Location 12 (AkHa-29), Location 15 (AlHa-52), Location 16 (AkHa-30), Location 18 (AkHa-31), Location 22 (AkHa-32), Location 26 (AkHa-33), Location 27 (AkHa-34), and the Cameron Site (AlHa-9) can undergo the recommended Stage 3 assessments, the sites should be avoided and protected by establishing 70 m "no-go" zones around the extent of each site as determined by the result of the Stage 2 Archaeological Assessment survey (Supplementary Documentation, Map 1, Tiles A-E).

Based on the proceeding recommendations, the *Aggregate Resources Act* Site Plans for the proposed Caledon Pit/Quarry were recommended to include the following conditions:

- a) A Stage 3 Archaeological Assessment is required for the following sites: Location 1 (AkHa-23), Location 2 (AkHa-24), Location 4 (AkHa-25), Location 7 (AkHa-26), Location 9 (AkHa-27), Location 10 (AkHa-28), Location 12 (AkHa-29), Location 15 (AlHa-52), Location 16 (AkHa-30), Location 18 (AkHa-31), Location 22 (AkHa-32), Location 26 (AkHa-33), Location 27 (AkHa-34), and the Cameron Site (AlHa-9).
- b) The limits of these archaeological sites plus a 70 m buffer shall be identified on the site plans and referred to as an "Archaeological Protection Area".
- c) Alterations are prohibited within the limits of the "Archaeological Protection Area" until such time that the MTCS has entered a report(s) in the Ontario Public Register of Archaeological Reports where the report(s) recommends that the archaeological site is of no further cultural heritage value or interest.
- d) Any archaeological site that is of further cultural heritage value or interest that remains within the licenced area at the time of surrender of the licence will be protected through a restrictive covenant on title.
- e) The protected sites must be fenced (post and wire) prior to commencing extraction.

To the best of our knowledge, no additional archaeological assessments have been conducted within the limits of the current Study Area or within 50 m of the Study Area.

Information concerning specific site locations is protected by provincial policy and is not fully subject to the *Freedom of Information Act*. The release of such information in the past has led to looting or various forms of illegally conducted site destruction. Confidentiality extends to all media capable of conveying location, including maps, drawings, or textual descriptions of a site location. For this reason, maps and data that provide information on archaeological site locations are provided as supplementary documentation and do not form part of this public report.

The MCM will provide information concerning site location to the party or an agent of the party holding title to a property, or to a licensed archaeologist with relevant cultural resource management interests.

4.0 STAGE 3 METHODOLOGY

4.1 Field Methodology

The Stage 3 AA of Location 18 (AkHa-34) was conducted over 12 days from August 18, 19, 23 to 25, 29 to 31 and September 1, 2, 6 and 7, 2022, under archaeological consulting license P364 issued to Michael Teal of WSP by the MCM (P364-0209-2022). Nicole Gavin (P1288), delegated licensed archaeologist for WSP, assumed responsibility of undertaking the archaeological fieldwork at the site as per Section 12 of the MCM 2013 *Terms and Conditions for Archaeological* Licences, issued in accordance with clause 48(4)(d) of the *Ontario Heritage Act* (Government of Ontario 1990b).

The weather during the assessment was variable (see Table 3). At no time were the conditions detrimental to the observation or recovery of archaeological material.

Table 3: Weather During the Stage 3 Site-Specific Assessment of Location 18 (AkHa-31)

| Date | Temperature | Weather Conditions |
|-------------------|-------------|----------------------|
| August 18, 2022 | 28°C | Sunny |
| August 19, 2022 | 29°C | Sunny |
| August 23, 2022 | 28°C | Sunny |
| August 24, 2022 | 31°C | Sunny |
| August 25, 2022 | 26°C | Overcast, Light Rain |
| August 29, 2022 | 23°C | Sunny |
| August 30, 2022 | 23°C | Overcast, Light Rain |
| August 31, 2022 | 24°C | Sunny, Partly Cloudy |
| September 1, 2022 | 24°C | Sunny |
| September 2, 2022 | 30°C | Sunny |
| September 6, 2022 | 23°C | Sunny |
| September 7, 2022 | 24°C | Overcast |

Photo locations are illustrated on Map 6. All activities undertaken during the assessment were in compliance with the *Ontario Heritage Act* (Government of Ontario 1990b) and the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011).

All coordinates and elevations for the Stage 3 AA were collected with a Trimble Geo7x Global Navigation Satellite System (GNSS) unit using the UTM NAD 83 (Zone 17) datum and coordinated within the Cansel network (Can-Net) for base station references. The collected coordinates are provided as a six-digit easting with three decimal places, and a seven-digit northing with three decimal places. As the coordinates are a fixed spatial position, each survey observation can be considered a permanent and known datum point regardless of any future disturbance to the location of each observation. The GNSS receiver is a dual frequency differential GPS (DGPS) capable of real time kinematic (RTK) corrections within the Can-Net Virtual Reference Station (VRS) network. The collected coordinates provide real time accuracy between 1 to 3 cm.

Location 18 (AkHa-31) was relocated from the original Stage 2 AA data. As a controlled surface pickup (CSP) that met all requirements outlined in Section 3.2.1 of the MCM's *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) was conducted for Location 18 (AkHa-31) as part of the Stage 2 AA, the Stage 3 AA began with test unit excavations. Location 18 (AkHa-31) was identified as a as post-contact artifact scatter that spans an 85 m (N-S) by 95 m (E-W) area, and as such, the Stage 3 excavation strategy of test units followed Section 3.2.2, Standards 1-12 of the MCMs 19th Century Rural Historical Farmstead Sites: Standards for Consultant Archaeologists (RHF Standards) (Government of Ontario 2021). The Stage 3 AA of the Location 18 (AkHa-31) piloted the RHF Standards as the fieldwork occurred during the 2022 pilot period. A 10-m excavation grid was placed over the Stage 2 artifact scatter, and additional test units, amounting to 40% of the initial grid unit total, were placed and excavated in areas of interest within the site. The grid was established across the extent of the site, as determined by the Stage 2 surface finds and positive test pits (Map 6). The grid squares are referred to by the intersection coordinates of their southwest corner. Each 5 m² set was further subdivided into 25 1 m² units, with sub-square number one located in the southwest corner of the 5 m² set, number five in the southeast corner, number six located immediately north of number one, and so on.

Each 1 m² test unit was excavated to ploughzone topsoil-subsoil interface which was then shovel shined and examined for evidence of subsurface cultural features prior to excavation to a depth of 5 cm into the subsoil. A test pit ("sondage") was excavated in each unit to confirm that the identified subsoil horizon did not represent a fill layer under which cultural or natural topsoil layers were present. All soil was screened through 6 mm hardware cloth to facilitate the recovery of small artifacts (Image 1 and Image 2). The Stage 3 excavation of Location 18 (AkHa-31) consisted of 48 grid units and 20 infill units for a total of 68 Stage 3 test units across an area measuring 65 m (N-S) by 100 m (E-W) (Map 6; Supplementary Documentation, Map SD1). Eight subsurface cultural features were identified during the Stage 3 AA (see Section 5.2 below). All features were recorded, drawn, and photographed before being covered with geotextile and backfilled. When a historical or modern post mould was observed in unit 825E 175N: 1, it was documented per Section 4.2.2, Standards 7a and d for the excavation of cultural features of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011). All Stage 3 test units were backfilled upon completion (Image 3).

All excavated artifacts were recorded with reference to their unit provenience and retained for laboratory analysis and description, as per Section 6.0 of the *Standards and Guidelines* (Government of Ontario 2011).

4.2 Artifact Analysis and Curation Methodology

This report and the following artifact inventory (Appendix A) provide a record of the artifacts and sampled material recovered from the study area/site. This information provides a basis for interpretation of the site. This report aims to offer enough artifact information that a future researcher may determine whether the study area/site is of relevance to their investigation.

4.2.1 The Artifact Inventory System

The artifact inventory was compiled on a Microsoft Access for Microsoft 365 MSO (Version 2202) database.

Each entry in the database contains the following information about a single artifact, or group of artifacts that all fit the same description:

- An individual inventory identification number,
- The spatial location (provenience) within the study area/site (operation, sub-operation, stratum/lot) from which the artifact(s) came,

- The artifact(s) analysis, and,
- The quantity of the entry (how many artifacts).

4.2.2 Artifact Analysis

The artifact analysis was based upon the MCM standard requirements, as set out in Tables 6.1 and 6.2 of the Standards and Guidelines (Government of Ontario 2011). Every artifact entry in the database includes material composition, artifact type (object), and the function which it served and if any alterations had been made to the original artifact (e.g., burning). Additional artifact descriptions are based upon the type of artifact (see below).

4.2.3 Indigenous Artifact

Indigenous artifacts include lithic debitage that was recorded by descriptive category (reduction, thinning, etc.).

4.2.4 Euro-Canadian Artifact

Euro-Canadian artifacts found during this investigation included: ceramic objects, glass items, and other inorganic and organic cultural objects (metal, stone, flora, fauna). Ceramic ware and glaze types were provided, as well as their decoration and colours. When a maker's mark was visible it was recorded. Date ranges were provided where possible, and the reference cited. Glass artifact colours and decorative patterns were recorded, in addition to technique of manufacture when identifiable. As with ceramic material, when a marker's mark was visible it was recorded. Date ranges were provided where possible, and the reference cited.

All other artifacts were described in as much detail as possible including surface treatment, decorative pattern, and technique of manufacture when identifiable.

4.2.5 Artifact Storage and Curation

The artifact collection was packed for storage by spatial location (provenience). When inventoried, artifacts were bagged in transparent, re-sealable (zippered) polyethylene bags which are inert and moisture resistant.

The contents of each artifact bag were identified on archival quality labels (acid-free, non-yellowing, acrylic adhesive), with an archival ink which is permanent and fade resistant. The artifact bags were then placed in a banker's box (12" W x 15" D x 10" H).

Artifact collections are stored in the London office archaeology lab, until the report has been submitted to the MCM, after which they will be moved to a secure, indoor, climate-controlled storage facility. This collection contains 6,835 artifacts and is packed in two standard size banker's boxes.

5.0 RECORD OF FINDS

The Stage 3 AA of Location 18 (AkHa-31) was conducted employing the methods described in Section 4.1. Map 6 illustrates the areas assessed and the method employed, while Image 1 to Image 3 illustrate the conditions during the Stage 3 fieldwork.

The UTM coordinates are listed in the Supplementary Documentation that accompanies this report separately.

The Supplementary Documentation also contains Map SD1 showing the specific locational information of Location 18 (AkHa-31)

Artifacts recovered from the Stage 3 AA of Location 18 (AkHa-31) have been washed, catalogued, and analyzed, and are stored in one banker's boxes at WSP's office at 309 Exeter Road in London, Ontario. Table 4 provides an inventory of the documentary record generated in the field, and a complete catalogue of all artifacts recovered during the Stage 3 assessment of the site is provided below in Appendix A.

Table 4: Inventory of Documentary Record

| Document Type | Current Location of Document | Additional Comments |
|-------------------------|------------------------------|---|
| Field Notes | WSP Office in London | 23 pages from original field notebook. Hard copies stored in project folder and digitally in project file. |
| Hand Drawn Maps | WSP Office in London | One from original field notebook. Hard copies stored in project folder and digitally in project file. |
| Maps Provided by Client | WSP Office in London | One map stored in project folder and digitally in project file. |
| Digital Photographs | WSP Office in London | 30 photos stored in project folder and digitally in project file. |

5.1 Stratigraphy

The stratigraphy at Location 18 (AkHa-31) consisted of medium to dark brown silty sand topsoil (Lot 1) over yellow brown sandy silt subsoil (Lot 2). Test units with typical stratigraphy ranged from 20 cm to 48 cm in depth (Image 4 and Image 5).

Several units located in the area of an old gravel driveway and adjacent to the existing driveway exhibited a layer of sod over compact grey gravel, which capped the natural soils (Image 6). In most cases these two fill layers were sterile of any cultural items, apart from three units: 810E 185N: 1, 825E 160N: 1, and 825E 175N: 1. These three units yielded a total of 264 artifacts from the gravel fill, which will be briefly discussed in Section 5.3.5 below. Artifacts recovered from the fill capping of these three units are out of context and, as such, will be recorded separately from the undisturbed portion of the site and omitted from the overall analysis of Location 18 (AkHa-31).

5.2 Subsurface Features

A total of eight subsurface cultural features were identified during the Stage 3 AA of Location 18 (AkHa-31)

Feature 1 was observed in test units 855E 165N: 1 and 855E 160N: 25. It encompassed the entire unit floor of 855E 165N: 1 and the southwest half of unit 855E 160N: 25 (Image 7 to Image 10). Feature 1 included various fill soil strata, including a very dark brown sandy silt from 0-34/37 cm, light grey ashy silt from 34-52 cm, grey sandy silt from 52-65 cm, dark brown mottled with light yellow silt from 65-78 cm, and redeposited dark brown silty sand topsoil from 78-120 cm. All layers of feature fill were dense with historical Euro-Canadian material, with a total yield of 1,904 artifacts and 33 fauna and flora elements between the two excavated units. Feature 1 is interpreted to be a large refuse pit feature.

Feature 2 was observed in test units 845E 145N: 1 and 840E 145N: 5, at 25 cm below surface. The portion of the feature that was visible in the plan of 845E 145N: 1 was square-shaped and in the northwest corner of the unit, while the portion of Feature 2 visible in 840E 145N: 5 was also square-shaped and located in the northeast quadrant of the unit. The feature fill consisted of dark brown sandy silt with charcoal inclusions (Image 11). No artifacts were recovered from the deposit. Feature 2 is interpreted as an indeterminate pit feature of possible historical affiliation.

Feature 3 was observed in test unit 835E 155N: 1, at 25 cm below surface. The portion of the feature visible in the southeast corner of the unit floor, in combination with the eastern and southern unit profiles, appears to be square-shaped (Image 12). The feature fill consisted of dark brown silty sand with wood inclusions visible in the southern profile. No artifacts were recovered from the deposit. Feature 3 is interpreted as a possible square post mould, likely of historical affiliation or related to modern land-use.

Feature 4 was observed in test unit 825E 175N: 1, at 50 cm below surface. The majority of the feature was visible in the northeast quadrant of the unit floor and was circular in shape. As Feature 4 was entirely exposed within the unit, it was fully documented and excavated at the time of the Stage 3 excavations. Feature 4 consisted of an approximately 20 cm by 20 cm circular deposit of dark brown silty sand with a shallow cylindrical profile and total depth of 15 cm (Image 13 to Image 15). Thirteen historical Euro-Canadian artifacts were recovered from the north half of the feature, and none were recovered from excavations of the south half. Feature 4 is interpreted as a post mould, likely of historical affiliation.

Feature 5 was observed in test unit 800E 150N: 25, at 38 cm below surface. The portion of the feature that was visible in southwest corner of the unit floor was triangular in shape. The feature fill consisted of dark brown silty sand (Image 16). No artifacts were recovered from the deposit. Feature 5 is interpreted as an indeterminate pit feature of possible historical affiliation.

Feature 6 was observed in test unit 825E 155N: 1, at 26 cm below surface. The feature extended across most of the unit, apart from the easternmost quarter (Image 17 and Image 18). Excavations continued in this unit through to the B-Horizon to further investigate whether this was a stratigraphic layer or feature deposit. It was also observed that intrusive sod andgravel fill soils from the former driveway capped the natural soils and Feature 6. The feature fill consisted of grey sandy silt that was relatively dense with historical Euro-Canadian artifacts (n=218) and faunal elements (n= 36). Feature 6 is interpreted as a possible pit feature related to the historical occupation of the site.

Feature 7 was observed in test unit 825E 160N: 1, at 15 cm below surface. The feature appears extended across the western two-thirds of the unit (Image 19 and Image 20). Excavations continued in this unit through to the B

and C Horizons to further investigate whether this was a stratigraphic layer or feature deposit. It was also observed that intrusive sod andgravel fill soils from the former driveway capped natural soils and Feature 7. The feature fill consisted of grey brown and dark brown silty sand that yielded 31 historical Euro-Canadian artifacts. Feature 7 is interpreted as a possible pit feature, related to either the historical occupation or modern land-use of the site.

Feature 8 was observed in test unit 825E 165N: 1, at 16 cm below surface. The feature extended across the entirety of the unit (Image 21). Excavations continued in this unit through to the B-Horizon to further investigate whether this was a stratigraphic layer or feature deposit. The feature fill consisted of grey sandy silt that yielded 95 historical Euro-Canadian artifacts and 56 faunal elements. Feature 8 is interpreted as a possible pit feature related to the historical occupation of the site. Features 6, 7, and 8 may be part of a related depositional event for the site, as they are in relative proximity and exhibit similarities in the consistency and colour of feature fill.

5.3 Artifact Assemblage

A total of 6,835 artifacts were found during the Stage 3 AA of Location 18 (AkHa-31). The number of artifacts per test unit is provided on Map 6.

A total of 6,571 artifacts were found from an intact, including 6,025 historical and 20th century Euro-Canadian artifacts, 519 faunal elements, 24 unidentifiable fragments of wood, and three pre-contact Indigenous artifacts.

Three excavation units yielded a total of 264 artifacts from a disturbed fill context: 810E 185N: 01, 825E 160N: 1, and 825E 175N: 1. The fill consisted of sod over a layer of gravel fill from either the existing or former gravel driveway. Of the 264 artifacts, 246 were historical Euro-Canadian, 15 were faunal elements, and three were 20th century items. These 264 artifacts have been removed from the following analysis.

5.3.1 Historical Euro-Canadian Artifacts

The historical and 20th century Euro-Canadian artifacts are summarized by function in Table 5 and detailed in the following sections.

Table 5: Historical and 20th Century Euro-Canadian Artifacts by Function

| Function | # of Artifacts |
|-------------------|----------------|
| arms/ammunition | 6 |
| food/beverage | 1,868 |
| fuel | 33 |
| furnishing | 21 |
| indeterminate | 1,840 |
| personal/societal | 288 |
| structural | 1,827 |
| tools/equipment | 141 |
| transportation | 1 |
| Total | 6,025 |

5.3.1.1 Food/Beverage Artifacts

A total of 1,868 artifacts were determined to have a food/beverage function. Food/beverage function artifacts were further divided into the more specific function categories seen in the table below.

Table 6: Food/Beverage Artifacts by Secondary Function.

| Secondary Function | Quantity |
|--------------------|----------|
| beverage container | 77 |
| food container | 386 |
| food preparation | 6 |
| food waste | 116 |
| storage container | 155 |
| tableware | 1,128 |
| Total | 1,868 |

Tableware

Most of the food/beverage artifacts had a tableware function (60.4%). Tableware objects were mainly ceramic, but also included glassware and the remains of five metal utensils (Image 22 to Image 24). Two ferrous (iron) forks were noted, as well as two pewter teaspoon fragments. Glassware artifacts included one sherd of manganese glass, which was commonly used by 1890 (Lockhart 2006:54). Identifiable vessel sherds included stemware, tumblers, a serving vessel lid, a pitcher and a sherd of decorative cruet. One sherd of tumbler was identified as Lynn glass, a decorative technique that produced horizontal ribs or grooves (Jones & Sullivan 1989:53).

Ceramic artifacts included sherds from: bowls, creamers, cup/mugs, pitchers, plates, saucers, teacups, and an eggcup and pepper pot. Numerous sherds of flatware and holloware were inventoried that could not be identified more specifically. Tableware ceramics often provide the best evidence for dating artifact assemblages as they change more often than other artifacts according to popularity trends. Basic ceramic tableware decoration types are summarized in Table 7 and representative examples of the decoration types found are shown in Image 25 to Image 32. Relevant date information is stated where available. Decoration types with an asterisk have further detail below.

Table 7: Ceramic Tableware Decoration Types

| Decoration Type | # of Artifacts | Date | Reference |
|--|-------------------|---|-------------------------|
| Decal: overglaze | 4 | 1890s to 1910s | (Huddleson 2013:616) |
| Decal: underglaze | 9 | Post 1910s | (Huddleson 2013:618) |
| Edged: symmetrical scalloped/imp. lines | 2 | 1800 to 1830 | (Miller 2013:488) |
| Edged: unscalloped, impressed, repetitive patterns | 12 | 1840s to 1860s | (Miller 2013:489) |
| Edged: unscalloped, unmoulded, painted lines | 1 | 1860s to 1890s | (Miller 2013:489) |
| Glaze: Jackfield-type | 7 | revival in the 1870s to 1880s | (MACL 2002) |
| Hand painted: blue | 10 | Circa 1775 to 1830 | (Samford & Miller 2002) |
| Hand painted: early palette | 2 | 1830 to 1870s | (Samford & Miller 2002) |
| Hand painted: late palette | 54 | became common in the 1830s and remained so until the 1870s | (Samford & Miller 2002) |
| Industrial slip: blue banded | 17 | common after 1840s, into 20th century | (Miller 1991:6) |
| Industrial slip: mocha | 11 | becomes rare on archaeological sites dating after 1850 | (Samford & Miller 2002) |
| Moulded* | 104 | 1840s to 1900 | (Samford & Miller 2002) |
| Sponged (closely spaced, dabbed colour) | 69 | common from the 1820s to the 1860s, most popular in the 1830s | (Samford 2013, p. 500) |
| Sponged: open | 23 | 1860 to 1935 | (Samford 2013:502) |
| Transfer printed* | 185 | 1820 to 1840 was the period of peak production | (Little 1969, p. 15) |
| Transfer printed: flow | 16 | Peak: 1840s to 1870s | (Richardson: 2013) |

Moulded

A total of 104 mould decorated ceramic sherds were noted (Image 30). Moulded tableware decoration dates from the 1840s to 1900 (Samford & Miller 2002). Decoration can be divided into three types:

- Foliage (including fruit, flowers, and leaves), dates primarily to the 1860s;
- Geometric, dates to the 1840s to 1850s;
- Harvest (wheat, including combinations with grapes, corn, clover, etc.), dates 1860s to 1900.

The Wheat Pattern was patented in 1848, with its peak period of production from the 1870s to the 1880s (Sussman 1985:7). A total of 26 sherds were identified with wheat pattern, 12 sherds with geometric decoration

and seven sherds were noted with foliage, one being a child's plate. Children's plates were most popular between 1820 and 1860 (Wooten 2013:508).

Transfer Printed

The most common decorative type found at Location 18 (AkHa-31) was transfer print (185 sherds) (Image 32). Transfer print as a ceramic decoration began in 1750s and was developed by John Sadler and Guy Green of Liverpool. It was then adopted by Josiah Wedgwood who brought the technique into the mainstream, achieving huge popularity. Transfer printing is a process by which a pattern or design is etched onto a copper (or other metal) plate. The plate is then inked, and the pattern is "transferred" to a special tissue. The inked tissue is then laid onto a bisque fired ceramic item, glazed, and fired again. Transfer print decoration was produced in blue, which still remains the most popular colour used, as well as other colours. The colour blue's peak production date is noted in the table below. Other colours found at Location 18 (AkHa-31) included black, brown, green, pink/red and purple, which all went through periods of popularity.

Table 8: Transfer Printed Ceramic Dates

| Date | Reference |
|--|-------------------------|
| Technique invented c. 1753 (overglaze) | (Kybalova 1989:212) |
| 1783 first underglaze printed patterns | (Shaw 1829) |
| 1820 to 1840 was the period of peak production | (Little 1969:15) |
| Declined in popularity in 1850s | (Miller 1991:9) |
| Revival in the 1870s | (Samford & Miller 2002) |
| Produced into the early 20th century | (Samford 1997:18) |
| Black, peak production 1825 to 1838 | (Samford & Miller 2002) |
| Blue, peak production 1817 to 1848 | (Samford & Miller 2002) |
| Brown, peak production 1829 to 1843 | (Samford & Miller 2002) |
| Purple, peak production 1834 to 1848 | (Samford & Miller 2002) |

Another decoration trend was "flown" colours, which became popular in the 1840s (Collard 1967:289). This decorative technique blurred or "flowed" transfer print glazes in the manufacturing process, producing a desired effect. At Location 18 (AkHa-31), 16 sherds with a flown blue pattern were recovered.

Transfer Printed Patterns

A total of 18 sherds were identified with a linear pattern on the border; these patterns were commonly produced from 1842 to 1858 (Samford & Miller 2002). Some of these sherds were also noted to have scenic vignettes, commonly produced 1832 to 1847 (Samford & Miller 2002). Geometric patterns were also identified on 12 sherds. These patterns find their roots in Chinoiserie and peak in production between 1818 and 1829. Two sherds of plate were identified with the Willow pattern.

Manufacturers Marks

When ceramics are marked with their country of origin, they usually date to after 1891 when the McKinley Tariff Act was put in place. William McKinley introduced the highly protectionist McKinley Tariff Act in 1890 which imposed tariffs on many imports (including ceramics) to make it easier for American manufacturers to sell their products. It was a requirement of this Act that all such imports were marked with their country of manufacture. In 1921, the Act was amended to require the phrase "Made in" preceding the country of origin. Of course, the labeling dates at individual British potteries varied (e.g., Wedgwood adopted the "Made in England" around 1908/10 and may have used it on some pieces as early as 1898) (Godden 1988:11). Four maker's marks with "ENGLAND", were noted in the Location 18 (AkHa-31) collection (Image 33), likely dating their manufacture to between 1891 and 1921. One "ENGLAND" mark was also WEDGWOOD, which would likely date this vessel's manufacture to between 1891 and 1908/10.

The pottery of Henry Alcock & Co (Ltd) was located in Cobridge, Stoke-on-Trent, England from 1861 to 1910. Pottery produced under the name "Ironstone China" was produced exclusively for the North American market (thepotteries.org).

J. & G. Meakin were operational from 1851 into the 20th century (Wetherbee 1980:29).

One sherd was found with a partial Diamond mark, these marks were used from 1842 to 1883 when a design was registered with the British Patent Office (Godden 1988:33). The Roman numeral above the top of the diamond, "IV" indicated the class of material, clay. The letter at the top of the diamond, "T" indicates 1867 as the year the design was registered (thepotteries.org).

Multiple Royal Arms marks were also noted. Though most Royal Arms marks are from post 1830, these are likely from post 1837 as a small central shield is not at the centre of the larger quartered shield in those visible.

One damaged mark with a lion and the partial writing "ADAMS" which was both black transfer printed and impressed is likely the mark of William Adams and Sons. This mark is reported to date from 1835 to 1855 (thepotteries.org)

Another partial maker's mark was "WEDGEWOOD/ENGLAND/RALE(igh)...". Due to the use of "England", this vessel's manufacture likely dates to between 1891 and 1921. A similar mark was found belonging to Wedgwood & Co (Ltd), a pottery operational from 1860 to 1965 (thepotteries.org).

Another maker's mark, although complete "BROOKLYN / S M & Co / ENGLAND" with a crown, could not be identified (Image 33). As the mark again includes "England", but not "Made in", its manufacture also likely dates to between 1891 and 1921.

Beverage Containers

Beverage container artifacts included glass bottle sherds of soda, wine and general alcohol bottles. Three sherds of lime green soda bottle glass date to the 20th century (Lindsey 2023). Two bottles were noted to have crown finishes. The crown finish was patented in 1892 (Jones & Sullivan 1989:163). Several crown caps were also inventoried (n=10), eight of them with plastic liners, which were used after the mid-20th century (Lindsey 2023). Four of the crown caps were identified as "Labatt's". In 1847, John Labatt went into partnership for a brewery andby 1855, Labatt became sole owner and renamed the brewery John Labatt's Brewery. One cap was marked as a "pilsner" which Labatt's began brewing in 1951 (https://labattheritage.lib.uwo.ca/timeline). Three fragments of foil bottle closure were also inventoried.

Food Containers

The majority of the 386 food container artifacts were sherds of coarse red earthenware holloware (n=342). These vessels, their shapes undefined further, may have been used in the kitchen for food preparation or for storage. There were also sherds from a yelloware bowl, decorated with blue mocha industrial slip which may have been either used in the kitchen, or on the table. Mocha decoration on yelloware began to be used in the 1840s (Samford & Miller 2002).

Multiple glass bottle fragments and a jar fragment, likely to have contained a sauce or condiment were noted. One complete bottle was embossed "GARTON'S HP SAUCE" (Image 34). A club sauce-type stopper was also recovered, embossed with "GARTON'S". Garton's began production of their HP Sauce in 1903, giving an earliest possible date for these artifacts (Lindsey 2020). Two ferrous (iron) can keys were also inventoried.

Food Preparation

Food preparation artifacts were varied and included sherds of a ceramic baking dish and milk pan, as well as a possible piping tip and strainer. Milk pans were used to separate cream from fresh milk and the cream was then used to make butter. The presence of a milk pan for processing fresh milk indicates that there were cows on the farmstead, which is confirmed by the historical archival research (Section 2.3.1.2).

Storage Container

A total of 155 sherds of ceramic and glass were identified as storage containers. Ceramic sherds were either coarse red earthenware or coarse stoneware. A number of the stoneware sherds belonged to a vessel that exhibited blue painted flowers and "TORONTO". This vessel was likely distributed by the Toronto Pottery Company, which was formed in 1899 (Newlands 1978). A number of glass jar sherds were catalogued, including 28 sherds of manganese glass. Manganese or solarized glass was commonly used by 1890 (Lockhart 2006:54).

Food Waste

A total of 116 fragments of faunal bone were included under the function group of food/beverage: food waste, as they all exhibited butchering marks.

5.3.1.2 Indeterminate Artifacts

A total of 1,840 artifacts could not be assigned a function. The most common indeterminate artifacts were made of metal (n=1,280). Hardware items included bolts, nuts, screws, spikes, staples, tacks, washers, and a cotter pin. One screw was identified with a Robertson head, dating it to after 1908 (Soniak 2011). Other indeterminate artifacts included fragments of ferrous (iron) containers, rods, sheet, strap and wire. A number of glass sherds could also not be assigned a function, including bottles and sherds that could only determined as holloware. Of these indeterminate glass sherds, 78 were manganese glass, commonly used by 1890 (Lockhart 2006:54). A total of 23 fragments of synthetic material were also inventoried. Synthetics were predominantly used from the turn of the 20th century and onward.

5.3.1.3 Structural Artifacts

A total of 1,827 artifacts from Location 18 (AkHa-31) had a structural function, including artifacts classed as building components or building hardware. Building component artifacts included fragments of a concrete block, red brick, mortar, windowpane glass and possible white metal roof tile. Ten sherds of ribbed privacy glass were inventoried. In the 1840s, James Hartley was granted a patent for embossing a simple pattern such as ribs into a sheet (Free 2020).

Building hardware included nails, two lock strike plates, two machine cut spikes, and a shutter dog. A total of 1,339 nails were inventoried, 977 of a common length, 360 of a lath length and two indeterminate (Image 35). The types of nail manufacture are shown in the table below.

Table 9: Nail Types

| Nail Type | Quantity |
|---------------|----------|
| cut | 707 |
| indeterminate | 46 |
| wire | 576 |
| wrought | 10 |
| Total | 1,339 |

There were three methods of nail manufacture that developed over time as the industry grew and became more mechanized. The first nails were hand wrought. Machine cut nails became available after 1800, when a nail cutting machine became of practical use (Vincent 1993:59). By the 1830s, machine cut nails had mostly replaced wrought nails in common use (Vincent 1993:163). Wire nails eventually replaced machine cut nails. They were first introduced in the 1860s but did not become common until the late 1880s to early 1890s (Miller et al 2000; Wells 2000). By 1900, wire nails were the most common nail type sold in North America and had largely taken over the nail market by 1920 with cut nails only making up about 8% of the nails being produced (Wells 2000: 327).

5.3.1.4 Personal/Societal Artifacts

A total 288 personal/societal artifacts were identified. These artifacts can be further divided into the more specific categories including adornment, clothing, commerce, footwear, health/hygiene, personal gear, recreation, and smoking.

Table 10: Personal/Societal Artifacts by Secondary Function.

| Secondary Function | Quantity |
|--------------------|----------|
| adornment | 4 |
| clothing | 30 |
| commerce | 5 |
| footwear | 9 |
| health/hygiene | 218 |
| personal gear | 3 |
| recreation | 8 |
| smoking | 11 |
| Total | 288 |

Adornment artifacts (Image 36) included a glass bead and two other decorative glass pieces that likely inset into jewelry or buttons. A possible white metal finger ring was inventoried. Also, a piece of decorative black plastic was also likely a jewelry piece. Plastics were not widely available until the late 1920s (Hillman 1986: 20).

Clothing artifacts included a variety of buttons. Button materials were varied and included bone, glass, iron, pewter, synthetic, porcelain and shell. The three porcelain buttons were Prosser manufactured, indicating that they date to post 1840 (Sprague 2002:111). The two synthetic buttons likely date to 20th century. Other clothing fasteners included buckles, grommets, rivets, and a snap. The type of metal rivet inventoried was patented in the United States of America in 1873 (Levi Strauss & Co.). Seven fragments of iron corset busk were also identified.

Commerce artifacts included four Canadian pennies with dates between 1943 and 1952 and a "Habitant" token, which was released in 1838 (Image 37 and Image 38) (Haxby & Willey 1991:185).

Footwear included nine fragmentary pieces, including soles, heels, and six grommets.

Health/hygiene artifacts included a fragment of black hair comb, likely Bakelite. Bakelite was patented in 1909 (Hillman 1986: 24). A small white glass jar with the base embossed "L MARIN BREVETE SGDG" around the number "60" was also found. Breveté SGDG was a type of patent mark used in France and Belgium until 1968. The name was a common abbreviation for "Breveté Sans Garantie Du Gouvernement" (patent without government guarantees) (Wikipedia).

Over 200 sherds of small glass bottles were inventoried, including cylindrical, oval, panel, rectangular and square. Some bottle sherds (n=12) were manganese glass, commonly used by 1890 (Lockhart 2006:54). A total of 140 sherds were found to have embossed lettering. Generally, embossed lettering was the most common form of commercial marking on containers in the 19th century (Jones & Sullivan 1989:16). By the 1920s embossing was almost obsolete due to the use of paper labels (Fike 1987:5). The majority of the sherds with embossed lettering were only a few letters and therefore could not be researched further. More complete examples that could be deciphered are documented below.

"THE/MALTINE/MFG CO/CHEMISTS/NEW YORK"

Maltine was introduced in 1875, and the Maltine Manufacturing Company was established in 1878, existing into the 1950s when it merged with another company (Fike 1987 110).

"NORTHROP & LYMAN CO LTD/TORONTO CANADA"

The company of Northrop and Lyman was located in Toronto from 1874 and existed into the 1960s (Fike 1987 110).

- "HENRY R. GRAY//MONTREAL" three

Henry Robert Gray opened his pharmacy in 1859 (https://bouteillesduquebec.ca/publicites/gray h)

- "AYER'S/CHERRY//PECTORAL//LOWELL/MASS USA"

Ayer's Cherry Pectoral was introduced in 1847 (Fike 1987 199).

Personal gear artifacts included a ferrous (iron) parasol or umbrella stretcher, a partial pocketknife, and a possible pocket watch.

Recreation artifacts included eight toys in fragmentary or complete states (Image 39). One was a "swirl" marble, which dates to post-1900 (Randall 1979:102). Three "little green army men" were recovered. These plastic toy

soldiers evolved from their lead counterparts in the 1930s (museumofplay.org). Two other synthetic (indeterminate plastic) toy fragments were found, likely dating to post 1920s.

A total of 11 smoking related artifacts were inventoried, ten white clay smoking pipe fragments, and a synthetic mouthpiece (Image 40). Generally, synthetics were not used in any quantity until the 1930s (Hillman 1986: 20). One of the clay pipe stems was impressed with "MONTREAL/HENDERSON", this manufacturer was operational from 1847 to 1876 (Bradley 2000: 117) (Image 40).

5.3.1.5 Tools/Equipment Artifacts

A total of 141 artifacts were assigned a tools/equipment function. This function category is broad and can be further broken down into agriculture, cleaning, heating/temperature control, horse related, sewing, writing and indeterminate secondary functions.

Table 11: Tools/Equipment Artifacts by Secondary Function.

| Secondary Function | Quantity |
|-----------------------------|----------|
| agricultural | 109 |
| cleaning | 5 |
| heating/temperature control | 1 |
| horse related | 1 |
| indeterminate | 11 |
| sewing | 2 |
| writing | 12 |
| Total | 141 |

The majority of artifacts were sherds of coarse red or coarse buff earthenware flowerpots (n=109). A few of these sherds included moulded decoration, and green sponge-painted decoration. Some sherds were also likely pieces of jardinière, vessels meant for indoor plants. The only other agricultural artifact was a possible ferrous (iron) maple sap spile/tap. Artifacts related to a cleaning function included fragments of a glass bottle base embossed with "LIQUID VENEER" and a clothes pin spring. These steel springs used with wood prongs were patented in 1887 (Miller 2000:15). The heating/temperature control-related artifact was a cast iron handle, likely for a stove grate. The horse related artifacts included two harness bells. Artifacts related to a sewing function included a fragment of scissors and a thimble, embossed with "THINK OF THEE". Writing-related artifacts included a slate pencil and a number of glass ink bottles or ink wells. One ink well was embossed with "UNDERWOOD'S INK" (Image 41). Two fragments of slate were identified as probable writing board fragments as one had a bevelled edge.

5.3.1.6 Fuel Artifacts

The 33 fuel artifacts included clinker, coal, and charcoal.

5.3.1.7 Furnishing Artifacts

A total of 21 furnishing artifacts were identified, all associated with a lighting function (Image 42). These included 20 sherds of glass lamp chimney, of which five were sherds of decorated upper rims. Lamp chimneys with a decorated upper rim were rare in Canada before circa 1885 (Woodhead, Sullivan, Gusset 1984:62). A sherd of embossed white glass was likely lamp-related.

5.3.1.8 Arms/Ammunition Artifacts

A total of six copper cartridges were found at Location 18 (AkHa-31) including two .22s, three .32s, and one indeterminate type (Image 43). The indeterminate cartridge base was marked "Dominion". The Dominion Cartridge Company began production in 1886 (Bradley 2008:5). Two of the other cartridges were marked with a "D", and one with a "B". Metallic cartridges were not widely used until the 1860s (Heard 2008:336). Cartridges of the .22 calibre were introduced in 1871 (Bradley 2008:5).

5.3.2 Faunal Elements

A total of 519 indeterminate faunal elements were recovered from Location 18 (Akha-31). The faunal assemblage included 476 indeterminate fragments of mammal bone, 27 indeterminate fragments of mammal dentition, and 16 indeterminate fragments of avian bone. A total of 36of the mammal bone fragments were calcined.

5.3.3 Flora Elements

There are 24 unidentifiable fragments of wood.

5.3.4 Pre-Contact Indigenous Artifacts

A total of three pre-contact Indigenous artifacts were recovered from Location 18 (AkHa-31), all of which were pieces of lithic debitage. The lithic debitage assemblage consisted of two biface thinning flakes and one flake fragment made of Onondaga chert. (Image 44).

Onondaga chert is a high-quality raw material found within the Onondaga Formation that outcrops along the north shore of Lake Erie west of the mouth of the Grand River as far west as Nanticoke, east of the mouth of the Grand River as far east as Fort Erie, and along the Onondaga Escarpment between Cayuga and Hagersville (Telford and Tarrant 1975). This material can also be recovered from secondary, glacial deposits across much of southwestern Ontario, east of Chatham (Eley and von Bitter 1989; Fox 2009:361-362).

5.3.5 Artifacts from a Disturbed Fill Context

As described above in Section 5.1, a total of 264 items were recovered from the sod and gravel fill capping in three test units (Map 6). To briefly summarize, the historical Euro-Canadian assemblage from the fill soils was primarily food/beverage related artifacts (n=117) and structural items (n=103), followed by lesser amounts of indeterminate artifacts (n=17), personal/societal items (n=7), and tools/equipment artifacts (n=2). Fifteen mammal bone and dentition fragments were recovered from the fill, as well as three 20th century items, including a piece of plastic electrical tape, a fragment of plastic jewellery, and one Canadian penny from 1960.

5.3.6 General Site Distribution

The frequency of artifacts across Location 18 (AkHa-34) is shown on Map 6 and Map 7. The site is located in an active farmstead that has been continuously occupied since the mid-19th century.

The largest concentration of material is centered on Feature 1, which was partially uncovered in units 855E 165N: 1 and 855E 160N: 25 and interpreted as a large refuse pit. Diagnostic artifacts from the topsoil and Feature 1 fill date predominantly to the late 19th century; however, the pit feature soils are also intermixed with a significant amount of mid-19th century and 20th century items, as well as a single early 19th century wrought nail. This refuse area would initially relate to the Cameron family's mid- to late 19th century occupation of the property, as well as the continuous occupation of the farmstead throughout the 20th and 21st centuries. Generally, most of the test units located between Feature 1 and the extant house are high yielding for the site with several counts over 100 artifacts. Furthermore, Feature 6 has been interpreted as another possible refuse pit for the site and yielded a high count of 218 historical Euro-Canadian artifacts and 36 faunal elements. In contrast to Feature 1, the diagnostic artifacts from Feature 6 trend towards a mid- to late 19th century date for the refuse deposit and is situated closer to the extant farmhouse.

Two other concentrations of artifacts are located from this main concentration between Feature 1 and the extant house. The first concentration is situated in the ploughed field, approximately 30-40 m to southeast, along the 145N grid line between 870E and 875E. The second concentration is situated immediately west of the extant house, approximately 20-50 m to the west, along the 805E grid line between 170N and 175N.

Spatially, no distinct cultural soil strata were identified, as artifacts from all time periods were found in the single topsoil lot across the site. The spatial distribution of diagnostic artifacts at Location 18 (AkHa-31) is shown on Map 7. Early 19th century artifacts appear to be distributed randomly throughout the site area, and consisted of mostly wrought nails that may have been repurposed, as well as one sherd of pearlware that is likely part of an heirloom item. Given the relatively small amount of early 19th century artifacts and the intermixed nature of the deposit overall, these artifacts do not represent areas of earlier occupation within the site. Diagnostic 20th century items are also intermixed throughout the site, as the farm has been continuously occupied up to the present-day. Overall, most units contain marginally greater amounts of mid-19th century artifacts compared to late-19th century artifacts. This spatial trend occurs across the entirety of the site, but no portions of the site appear to be related solely to mid-19th century or late 19th century components of Location 18 (AkHa-31).

6.0 ANALYSIS AND CONCLUSIONS

6.1 Historical Euro-Canadian Component

Location 18 (AkHa-31) appears to be an area of domestic refuse predominately associated with the occupation of the extant house on the property from the mid-19th century to the present day. The property is associated with the family of Duncan Cameron who purchased Lot 17, Concession 4 WSCR in May of 1846 for £150 from John J. Johnson and his wife (Miss MacDonald), who had their U.E.L. grant in the Caledon West area. Duncan Cameron is one of the six sons of John Cameron's family who emigrated from Scotland in 1828 and settled on the adjacent Lot 16 Concession 4 WSCR in 1836 (Ontario Land Registry, n.d.(a), 307). Tremaine's 1859 map shows Duncan Cameron as the owner of the entire 200 acres of Lot 17, and a house located near the south-southwest corner of the property, set back from both the concession and adjacent Lot 16 (Tremaine 1859, Map 3). By the 1871 Census, Duncan Cameron is listed as the owner of two town building lots, two houses (1871 Census, Schedule 3, 8), and 200 acres of farmland. The 1877 Historical Atlas map also depicts a house located in same general location as the 1859 map (Walker and Miles 1877, Map 3). Location 18 (AkHa-31) surrounds the existing farmhouse at 18667 Mississauga Road, which appears to be in the same location as the house that is visible on both historical maps (Map 3). This extant house is identified on the Town of Caledon Heritage Register as a "mid-19th century farmstead" with a construction date ranging from 1850 to 1874 (Corporation of the Town of Caledon 2022). The one extant barn on the property is of the Central Ontario style, which was popular in the latter half of the 19th century. Duncan Cameron remained the owner of Lot 17 until his death in 1902 and the acreage of Lot 17 was divided equally between his two sons, with the southwest half, including the original house, going to the elder son Duncan A. and the northeast half to the younger son James A. (Ontario Land Registry n.d.(b), 433). By 1937, the house and two barns or outbuildings are illustrated on 20th century topographic maps and aerial imagery (Map 4 and Map 5).

Most of the artifacts recovered from Location 18 (AkHa-31) are either food/beverage related artifacts (n=1,868, 31% of the total assemblage), structural items (n=1,827, 30.3% of the total assemblage), or artifacts with an indeterminate function (n=1,840, 30.5% of the total assemblage). The dateable components from the assemblage (n=2,689, 44.6% of the total assemblage), mostly consist of nails (48% of the dateable assemblage) and tableware (39% of the dateable assemblage), which date to the mid- or late 19th century. Overall, the late 19th century and 20th century material consists of 43.3% of the dateable assemblage, which has the remaining 56.8% dating to pre-1870. Of this 56.8%, only 0.4% dates to the early 19th century, specifically 10 wrought nails and one sherd of pearlware that are randomly distributed throughout the site. The Location 18 (AkHa-31) artifact assemblage consists of material that is typically associated with domestic occupations (i.e., food and beverage-related items, structural artifacts, glass containers of indeterminate function, miscellaneous hardware items, and personal/societal artifacts). These findings are generally consistent with the conclusions of the Stage 2 artifact assemblage from Location 18 (AkHa-31) (Golder 2022).

Eight subsurface features were identified during the Stage 3 AA of Location 18 (AkHa-31) (Section 5.2). Feature 1 has been interpreted as a large pit feature representing a significant refuse deposit area at Location 18 (AkHa-31). Feature 1 yielded a high density of historical Euro-Canadian artifacts that date primarily to the late 19th century. Feature 2 and Feature 5 were identified as indeterminate pit features of possible historical affiliation. Feature 3 and Feature 4 were identified as post moulds that are related to either the historical or modern land-use of the site. Feature 6, Feature 7, and Feature 8 have been interpreted as possible pit features that are likely related to the historical occupation of the site, given the amount of mid-19th century artifacts yielded from the

deposits. These three features may be part of a related depositional event for the site, as they are in relative proximity and exhibit similarities in the consistency and colour of feature fill.

Given the Cameron familial connection between Lot 16 and 17, Location 18 (AkHa-31) is related to nearby sites: Location 27 (AkHa-34), Location 4 (AkHa-25), and Location 7 (AkHa-26). These sites are associated with Duncan Cameron's immediate family's mid-19th century occupation of Lot 16 and were likely occupied at least concurrently with Location 18 (AkHa-31) Based on the Stage 3 AA results of Location 4 (AkHa-25), this site has been interpreted as the initial occupation site of the Cameron family in the Caledon area (WSP 2023a). In relation to these other Cameron family sites, Location 4 (AkHa-25) dates to the mid-19th century but has a proportionally higher amount of early 19th century artifacts and comparatively lower amounts of late 19th century artifacts. The presence of a feature that may represent a prior structure (possibly a cabin) was also revealed at Location 4 (AkHa-25). It was typical practice by settler families to clear a small area of their lot and built a shanty or log cabin until they could afford to build a frame house. The extant Neoclassical style farmhouse associated with Location 27 (AkHa-34) has a reported construction date of 1850-1874, which is similar to that of the extant house located at Location 18 (AkHa-31) (Corporation of the Town of Caledon 2022). The Stage 3 AA of Location 27 (AkHa-34) also revealed a similarly intermixed artifact assemblage that dates primarily to the mid- to late 19th century and is associated with the Cameron family's continuous occupation of the farmstead from 1850 into the 20th century (WSP 2023b). Finally, Location 7 (AkHa-26) is located between Location 4 (AkHa-25) and Location 27 (AkHa-34) and was revealed through Stage 3 AA to be a a deposit of primarily structural artifacts that surrounds the historical structural remains of a barn or stable (WSP 2023c).

Based on the results of the Stage 3 AA of Location 18 (AkHa-31), WSP concludes that a sufficient level of archeological data has been revealed to provide an understanding of the mid- to late 19th century occupation by the Cameron family and assess the CHVI of the site. Location 18 (AkHa-31) does not meet any of the criteria identified in Standard 2 of Section 3.4 of the RHF Standards (Government of Ontario 2021), or Standards 1a-b of Section 3.4.2 of the Standards and Guidelines (Government of Ontario 2011) for domestic archaeological sites dating after 1830. As such, the historical Euro-Canadian component of Location 18 (AkHa-31) is determined to have been sufficiently documented and is concluded to have no further CHVI. Therefore, Location 18 (AkHa-31) does not require Stage 4 mitigation prior to any development impacts.

6.2 Pre-Contact Indigenous Component

The pre-contact Indigenous artifact assemblage consisted of three pieces of lithic debitage made of Onondaga chert. Lithic debitage is not a diagnostic artifact type and therefore cannot be assigned a specific occupational time period or specific cultural affiliation. The isolated nature of the artifacts could be attributed to being inadvertently intermixed with the historical material and redeposited sometime during the historical occupation. As such, the pre-contact Indigenous component at the site is concluded to have no further CHVI as it does not meet the criteria identified in Section 3.4.1, Standards 1a-d of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011).

7.0 RECOMMENDATIONS

The results of the Stage 3 AA of Location 18 (AkHa-31), and the analysis and conclusions presented in Section 6.0, provide the basis for the following recommendations:

1) The historical Euro-Canadian component of Location 18 (AkHa-31) has no further cultural heritage value or interest and does not require Stage 4 mitigation of impacts.

2) The pre-contact Indigenous component of Location 18 (AkHa-31) has no further cultural heritage value or interest and does not require Stage 4 mitigation of impacts.

The Ontario Ministry of Citizenship and Multiculturalism is asked to review the results and recommendations presented herein, accept this report into the Provincial Register of archaeological reports and issue a standard letter of compliance with the Ministry's 2011 *Standards and Guidelines for Consultant Archaeologists* and the terms and conditions for archaeological licencing.

8.0 ADVICE ON COMPLIANCE WITH LEGISLATION

This report is submitted to the Ministry of Citizenship and Multiculturalism as a condition of licensing in accordance with Part VI of the *Ontario Heritage Act* (Government of Ontario 1990b). The report is prepared to ensure that it complies with the standards and guidelines that are issued by the Minister, and that the archaeological fieldwork and report recommendations ensure the conservation, protection and preservation of the cultural heritage of Ontario. When all matters relating to archaeological sites within the project area of a development proposal have been addressed to the satisfaction of the Ministry of Citizenship and Multiculturalism, a letter will be issued by the Ministry stating that there are no further concerns with regards to alterations to archaeological sites by the proposed development.

It is an offence under Section 48 and 69 of the *Ontario Heritage Act* for any party other than a licensed archaeologist to make any alterations to a known archaeological site or to remove any artifact or other physical evidence of past human use or activity from the site, until such time as a licensed archaeologist has completed archaeological fieldwork on the site, submitted a report to the Minister stating that the site has no further cultural heritage value or interest, and the report has been filed in the Ontario Public Register of Archaeological reports referred to in Section 65.1 of the *Ontario Heritage Act* (Government of Ontario 1990b).

Should previously undocumented archaeological resources be discovered, they may be a new archaeological site and therefore subject to Section 48(1) of the *Ontario Heritage Act*. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed consultant archaeologist to carry out archaeological fieldwork, in compliance with Section 48(1) of the *Ontario Heritage Act* (Government of Ontario 1990b).

The Funeral, Burial and Cremation Services Act, 2002, S.O. 2002, c.33, requires that any person discovering or having knowledge of a burial site shall immediately notify the police or coroner (Government of Ontario 2002). It is recommended that the Registrar of Cemeteries at the Ministry of Consumer Services is also immediately notified.
